

I. C. 7304,
January 1945.

INFORMATION CIRCULAR

UNITED STATES DEPARTMENT OF THE INTERIOR - BUREAU OF MINES

BIBLIOGRAPHY OF BUREAU OF MINES INVESTIGATIONS ON THE PRODUCTION
OF LIQUID FUELS FROM OIL SHALE, COAL, LIGNITE, AND NATURAL GAS^{1/}

By Arno C. Fieldner^{2/} and Paul L. Fisher^{3/}

CONTENTS

	<u>Page</u>
Introduction	1
General	1
Oil shale and shale oil	2
Carbonization of coal and lignite	3
Low-temperature carbonization	6
Tests by Bureau of Mines - American Gas Association method ...	7
Direct hydrogenation of coal, lignite, and tar	10
Synthesis of methanol and hydrocarbons	14
	17

INTRODUCTION

In view of the widespread interest in the production of synthetic liquid fuels from solid and gaseous fuels to supplement declining reserves of petroleum, and the many requests that are now being received for information on the subject, this bibliography of Bureau of Mines contributions has been compiled. In addition to the publications issued by the Government in printed or mimeographed form, references are included to articles written by the Bureau staff for the technical press and to cooperative reports of work done jointly with States, colleges, and industries. References are given under each section in chronological order.

Bureau of Mines bulletins, technical papers, and Minerals Yearbooks are printed and are obtainable at the prices indicated from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. If no price is given, the publication is out of print. The price of entire volumes of the Minerals Yearbook or of reprints of certain chapters may be obtained upon request. Any orders or remittances in payment for these publications should be sent directly to the Superintendent of Documents and not

^{1/} The Bureau of Mines will welcome reprinting of this paper, provided the following footnote acknowledgment is used: "Reprinted from Bureau of Mines Information Circular 7304."

^{2/} Chief, Fuels and Explosives Branch, and, Chief, Coal Division, Bureau of Mines, Washington, D. C.

^{3/} Coal technologist, Fuels and Explosives Branch, Bureau of Mines, Washington, D. C.

to the Bureau of Mines. This will prevent delay in filling orders and avoid the extra work of transmitting them from the Bureau to the Superintendent of Documents, and of obtaining receipts for funds which the Bureau of Mines cannot accept. For convenience in remitting, coupons having a face value of 5 cents are sold by the Superintendent of Documents in sheets of 20 for \$1.00. These coupons are accepted in orders for relatively small amounts.

Reports of investigations, information circulars, and copies of Congressional hearings are published in mimeographed form and may be obtained (if not out of print) without charge from the Office of Minerals Reports, Bureau of Mines, Washington 25, D. C.

Cooperative publications present the results of investigations conducted cooperatively with various agencies. These reports and papers have been written either wholly or in part by members of the Bureau and published otherwise than by the Bureau or by journals of various technical societies or by the technical press.

As there has been a liberal distribution of all these Bureau publications to public and college libraries in the United States and to some extent in foreign countries, those reports which are now out of print may be found in the technical and large public libraries. Likewise, bound volumes of the scientific and trade periodicals in which Bureau of Mines papers appear may be consulted in libraries throughout the country. Dealers in new and second-hand books sometimes have copies of these reports for sale.

GENERAL

1. FIELDNER, A. C., AND BROWN, R. L. The Complete Utilization of Coal and Motor Fuel. Oil, Paint and Drug Reporter, vol. 108, pt. 2, Oct. 5, 1925, pp. xii-xiii; Am. Gas Jour., vol. 124, 1926, pp. 448-452; Blast Furnace and Steel Plant, vol. 14, 1926, pp. 138-140, 148.
