T.A.C. REPORT ZAL-1

ANALYTICAL METHOD REPORT No. 1

Compiled by:

E. L. Baldeschwieler, Petroleum Administration for War

Information Supplied by the

UNITED STATES GOVERNMENT
TECHNICAL OIL MISSION

Submitted for Distribution
by the

PETROLEUM ADMINISTRATION FOR WAR

to the

TECHNICAL ADVISORY COMMITTEE
(A Subcommittee of the Technical Committee)

of the

PETROLEUM INDUSTRY WAR COUNCIL

August 31, 1945

TABLE OF CONTENTS

	<u>Page No.</u>
I. Summary	1
II. Introduction	3
III. Personnel Interviews	3
IV. Plant and Laboratory Visits	5
V. Documents	6
VI. Abstracts of Analytical Reports from Oppau, Ludwigshafen, and Leuna.	
1. Analytical determination of ammonia, mono-, di-, and trimethylamine, Leuna, September 30, 1932	6
2. Research on the determination of impurities in electric arc acetylene by fractional distillation. Leuna, December 29, 1933	7
3. Analytical determination of gas mixtures, in par- ticular those containing large amounts of gaseous hydrocarbons. Leuna, April 5, 1933	7
4. Volumetric determination of two olefin groups. Leuna, March 28, 1939	9
5. Quantitative determination of low boiling point phenols in phenolic oils by close fractionation ...	10
6. Report on a conference on molecular spectra held in Leuna on January 21, 1941	10
7. Isoprene determination. Leuna, December 30, 1943.	11
8. Research with a new indicator to replace Methyl Orange. Leuna, December 7, 1936	12
9. Determination of bromine number in benzines and other olefinic solutions. Leuna	12
10. New infrared method for gas analysis. Oppau, May 10, 1938	13

TABLE OF CONTENTS
(Continued)

	<u>Page No.</u>
11. Researches with the electron microscope. Oppau, June 6, 1936	13
12. Determination of nitrogen in coals, tars, oils, benzines, and similar products. Analytical laboratory. Oppau, October 10, 1938	14
13. The determination of Phosgene, Thionylchloride, Sulfurous Acid, Chlorine, and Sulfur Dichloride in the presence of each other. Ludwigshafen, May 2, 1943	15
14. Research on benzines of high olefin content, particularly on determination of the aromatic content. Oppau, June 1, 1939	17
15. Determination of acetylene and hydrocarbons in liquid oxygen from the Linde apparatus. Leuna, May, 1940	19
16. The determination of olefins and aromatics in hydrocarbon mixtures. Oppau, April 7, 1941	21
17. Volumetric determination of very small amounts of sulfur in benzines, phenols, and leaves. Leuna, April 10, 1941	22
18. Fluorine and silicic acid determination in cryolite. Leuna, March 8, 1941	22
19. Determination of sulfate in sulfonated detergents and wetting agents. Leuna, December 4, 1941	23
20. Research on phosphoric acid determination in catalysts. Leuna, May 8, 1941	23
21. A new method for the oxidation splitting of osnides. Leuna, June 11, 1941	24
22. Potentiometric molybdenum titration. Leuna, June 30, 1936	25

TABLE OF CONTENTS
(Continued)

	<u>Page No.</u>
23. Determination of available sulfur in polysulfide solutions. Leuna, February 7, 1941	26
24. Measure of the reaction heat of the condensation of an aliphatic aldehyde. Leuna, February 10, 1941	27
25. Preparation, properties, and comparative capillary chemistry research on eight sulfonates and sulfates derived from hexadecane. Leuna, January, 1941	27
26. Volumetry of non-ideal gases. More volume of butadiene. Leuna, March, 1939	29
27. Comparison of various procedures for the determination of olefins. Leuna, February 16, 1943.	29
28. The ultraviolet colorimeter, a control apparatus for the determination of phenol and other substances. Leuna, October 2, 1941	30
29. Analytical methods for Mersol, Mersolate, and wetting agents containing Mersolates. Further developments in 1942. Leuna, January 27, 1943 .	30
30. Determination of minute amounts of carbon disulfide. Leuna, February 1, 1943	31
31. Separation of the di- and polysulfochlorides in Mersol by precipitation with hydrocarbons. Leuna, February 1, 1943	32
32. Volatility of H ₂ S in solution of various hydrogen ion concentrations. Leuna, November 18, 1929 .	32
33. The preparation of methoxybutadiene from crotonaldehyde acetylation products. Leuna, May 14, 1942	35
34. Methods and apparatus for the determination of water vapor in gases by means of calcium nitride Ludwigshafen, February 7, 1942	35

TABLE OF CONTENTS

(Continued)

	<u>Page No.</u>
35. The physical-chemical principles of extinction spectrography and its uses in visible and long wave ultraviolet light. Leuna, October 3, 1942	35
36. Efficiency of laboratory columns. Leuna, December 5, 1940	35
37. On the nature of the aromatic hydrocarbons present in prehydrogenation products. Leuna, April, 1931	36
38. Quantitative determination of ethylene oxide. Oppau, January 31, 1938	36
39. The vacuum rectification of the mixture phenetol-benzylamine in empty glass tubes. Leuna, October 23, 1944	37
40. Volumetric analyses with iron salts. (Ferrometry). Leuna, December, 1941	38
41. Investigation of ketone oils. Leuna, February 23, 1943	39
42. Investigation on the nature of the higher boiling half of the xylenol fraction of the M-phenolic oil. Leuna, October 12, 1942	41
43. Investigation of the K-fraction. Leuna, February 23, 1943	41
44. Determination of benzoyl peroxide. Leuna, April 29, 1942	42
45. Patent Application. Frankfurt am Main, March 18, 1940. Procedure for the separation of aliphatic oxygenated compounds, as well as straight chain hydrocarbons containing at least 6 carbon atoms, from mixtures containing these compounds	43
46. Analytical and preparative accurate separation of hydrocarbon mixtures. Oppau, March 14, 1930.	43
