

## ACKNOWLEDGEMENTS

I would like to express my sincere gratitude to Dr. Robert S. Hansen for his support and guidance throughout this project. His encouragement during many informative discussions was invaluable. I also thank Dr. Hansen for the independence to develop this project and draw my own conclusions from the results.

I wish to thank Mr. Jim Andregg for his assistance in the ESCA work and Mr. Edward Quick for the use of his ruthenium ( $10\bar{1}2$ ) crystal in the LEED work.

Particular thanks are due Mother, Mammie and Ba for their encouragement during my high school and undergraduate college years.

The gratitude that I owe my wonderful wife, Gayle, is immeasurable. It was Gayle's encouragement which was solely responsible for my decision to pursue this degree. The high goals that she has set for her life have challenged me to accomplish more in my own life. Without having Gayle to rely upon when things were not going right, I would never have completed this work. In addition to her own love and devotion, Gayle has given me the most wonderful gift ever-our son, Christopher. The love and happiness that they have provided have been my source of strength and joy.

***This report was printed specifically for your order  
from nearly 3 million titles available in our collection.***

For economy and efficiency, NTIS does not maintain stock of its vast collection of technical reports. Rather, most documents are custom reproduced for each order. Documents that are not in electronic format are reproduced from master archival copies and are the best possible reproductions available.

Occasionally, older master materials may reproduce portions of documents that are not fully legible. If you have questions concerning this document or any order you have placed with NTIS, please call our Customer Service Department at (703) 605-6050.

## **About NTIS**

NTIS collects scientific, technical, engineering, and related business information – then organizes, maintains, and disseminates that information in a variety of formats – including electronic download, online access, CD-ROM, magnetic tape, diskette, multimedia, microfiche and paper.

The NTIS collection of nearly 3 million titles includes reports describing research conducted or sponsored by federal agencies and their contractors; statistical and business information; U.S. military publications; multimedia training products; computer software and electronic databases developed by federal agencies; and technical reports prepared by research organizations worldwide.

For more information about NTIS, visit our Web site at  
<http://www.ntis.gov>.
