

FINAL TECHNICAL PROGRESS REPORT
Including the Tenth Quarterly Technical Report

Covering the Period September 26, 1990 to May 25, 1993

**SYNTHESIS OF OCTANE ENHANCERS DURING
SLURRY-PHASE FISCHER-TROPSCH**

Prepared for the U.S. Department of Energy Under
Contract No. DE-AC22-90PC90047

June 10, 1993

Prepared by: G. Marcelin, Project Manager
 Altamira Instruments, Inc.
 2090 William Pitt Way
 Pittsburgh, PA 15238
 and
 A. M. Kazi and A. Nikolopoulos
 Department of Chemical Engineering
 University of Pittsburgh
 Pittsburgh, PA 15261

TABLE OF CONTENTS

Executive Summary	1
Objectives	3
Technical Report	4
1. MTBE Synthesis over Acid Catalysts	4
1.1 Introduction	4
1.2 Experimental	4
1.2.1 Catalysts	4
1.2.2 Catalyst Characterization	5
1.2.3 Reaction System and Procedure	6
1.3 Results	8
1.3.1 Catalyst Characteristics	8
1.3.2 Reaction Measurements and Analysis	10
1.3.3 Reaction Behavior at Various Temperatures	10
1.4 Discussion	19
2. Ether Synthesis During FT Reaction	24
2.1 Introduction	24
2.2 Experimental	25
2.2.1 Catalyst Preparation	25
2.2.2 Catalyst Characterization	26
2.2.3 Reaction Studies	27
2.3 Results	29
2.3.1 Elemental Analysis	29
2.3.2 X-Ray Diffraction	29
2.3.3 CO Chemisorption	29
2.3.4 CO Hydrogenation over Supported Metal and Composite Catalysts	33
2.3.5 Addition of Isobutylene during CO Hydrogenation	45
2.4 Discussion	54
2.4.1 CO Hydrogenation	54
2.4.2 Addition of Isobutylene during CO Hydrogenation	59
2.5 Summary	61
3. Slurry-Phase MTBE Synthesis	63
3.1 Introduction	63
3.2 Experimental	63
3.2.1 Reactor	63
3.2.2 MTBE Synthesis from Methanol and Isobutylene	65
3.2.3 MTBE Synthesis from Syngas and Isobutylene	65
3.3 Results and Discussion	66
3.3.2 MTBE Synthesis from Methanol and Isobutylene	66
3.3.3 MTBE Synthesis from Syngas and Isobutylene	74
4. Conclusions	74
5. Recommendations	76
6. References	76

LIST OF FIGURES

1.1	Schematic diagram of reaction system used for MTBE synthesis studies	7
1.2	Effect of flow rate on MTBE synthesis reaction rate over LZ210-12 zeolite	11
1.3	Rate of methanol conversion as a function of time for LZ210-12	12
1.4	Effect of time-on-stream on selectivities and production rates of various products	18
1.5	Turnover frequency for MTBE synthesis for the various materials studied at 100°C	20
1.6	Steady-state activity as a function of acid site concentration for MTBE synthesis and n-pentane cracking	21
2.1	Schematic of reaction system used in syngas studies	28
2.2	Rate of methanol formation over Pd and Li-Pd catalysts	35
2.3	Rate of methanol and MTBE formation over Li4/Pd/S2 + ZSM-5	40
2.4	Rate of methanol and MTBE formation over Li4/Pd/S2 + LZ210-12	41
2.5	Rate of methanol and MTBE formation over Li1/Pd/S1 + ZSM-5	42
2.6	Rate of MTBE formation over Li6/Pd/S1 + ZSM-5 (physical mixture) using a syngas + isobutylene feed	50
2.7	Rate of MTBE formation over Li6/Pd/S1 + LZ210-12 (physical mixture) using a syngas + isobutylene feed	51
2.8	Rate of MTBE formation over Li6/Pd/S1 + ZSM-5 (dual bed) using a syngas + isobutylene feed	52
2.9	Isobutylene conversion and product selectivities over Li4/Pd/S2 + ZSM-5	55
2.10	Isobutylene conversion and product selectivities over Li4/Pd/S2 + LZ210-12	56
2.11	Rate of elution of various hydrocarbons during CO hydrogenation in the absence and presence of isobutylene over Li4/Pd/S2 + ZSM-5	57
2.12	Rate of elution of various hydrocarbons during CO hydrogenation in the absence and presence of isobutylene over Li4/Pd/S2 + LZ210-12	58
2.13	Selectivities of isobutylene to various products over Li4/Pd/S2 + ZSM-5	62
3.1	Schematic diagram of SBCR	64
3.2	Relative molar concentrations of methanol and i-butylene in SBCR	67
3.3	Iso-butylene conversion during reaction of methanol and i-butylene in SBCR	68
3.4	Selectivities to major products during reaction of methanol and i-butylene in SBCR	69
3.5	Relative molar concentration of methanol and i-butylene feeds in SBCR	70
3.6	Iso-butylene conversion during reaction of methanol and i-butylene in SBCR	72
3.7	Relative concentrations of i-butylene and methanol in SBCR effluent after feed shut-off	73

LIST OF TABLES

1.1	Summary of Structural and Acid Properties of Catalysts	9
1.2	Steady State Results for MTBE Synthesis Over Acid Catalysts at 100°C	13
1.3	Steady State Results for MTBE Synthesis Over Acid Catalysts at 175, 230°C	15
1.4	MTBE Synthesis over Zeolite LZ210-12. Comparison Between 1 and 2 Step Experiments at 175°C	16
1.5	MTBE Synthesis over Zeolite ZSM-5. Comparison Between 1 and 2 Step Experiments at 175°C	17
2.1	Impurity Concentration in SiO ₂ Support	30
2.2	Metal and Promoter Loadings from Elemental Analysis	31
2.3	Properties of Li Promoted Pd/SiO ₂	32
2.4	Product Distribution during CO Hydrogenation over Li Promoted Pd/SiO ₂ Catalysts	34
2.5	Rate of Methanol Elution and MTBE Formation during CO Hydrogenation with Isobutylene Addition over Li6/Pd/S1 + Zeolite	36
2.6	Effluent Analysis During CO Hydrogenation in Absence and Presence of i- Butylene over Physical Mixture and Dual Bed of Li6/Pd/S1 and ZSM- 5	38
2.7	Effluent Analysis During CO Hydrogenation in Absence and Presence of i- Butylene over Physical Mixture and Dual Bed of Li6/Pd/S1 and LZ210-12 . . .	39
2.8	Rate of Formation/Elution of Individual Hydrocarbons During CO Hydrogenation over Li-Pd/SiO ₂ and Composite Catalysts	43
2.9	Effluent Analysis During CO Hydrogenation in Absence and Presence of Isobutylene over the Physical Mixture of Li-Pd/SiO ₂ and ZSM-5	44
2.10	Rate of Methanol Formation over Li-Promoted Pd/SiO ₂ in the Absence and Presence of Isobutylene	46
2.11	Selectivity and Conversion of Isobutylene Added During CO Hydrogenation over Li-Pd/SiO ₂ and Composite Catalysts	47
2.12	Rate of Isobutylene Hydrogenation during CO Hydrogenation over Li- promoted Pd/SiO ₂	48
2.13	Rate of CH ₃ OH Elution and MTBE Formation During CO Hydrogenation with Addition of i-Butylene over a Physical Mixture of Li-Pd/SiO ₂ and Zeolite	53
3.1	Summary of Reaction of Syngas/i-Butylene over Pd-Li-HY Catalyst in a Slurry Medium	75
