## Abstract

This project was divided into two parts. One part evaluated possible catalysts for producing higher-alcohols ( $C_2$  to  $C_{5+}$ ) as fuel additives. The other part provided guidance by looking both at the economics of mixed-alcohol production from coal-derived syngas and the effect of higher alcohol addition on gasoline octane and engine performance. The catalysts studied for higher-alcohol synthesis were molybdenum sulfides promoted with potassium. The best catalysts produced alcohols at a rate of 200 g/ kg of catalyst/ h. Higher-alcohol selectivity was over 40%. The hydrocarbon by-product was less than 20%. These catalysts met established success criteria. The economics for mixed alcohols produced from coal were poor compared to mixed alcohols produced from natural gas. Syngas from natural gas was always less expensive than syngas from coal. Engine tests showed that mixed alcohols added to gasoline significantly improved fuel quality. Mixed-alcohols as produced by our catalysts enhanced gasoline octane and decreased engine emissions. Mixed-alcohol addition gave better results than adding individual alcohols as had been done in the 1980's when some refiners added methanol or ethanol to gasoline.

## Table of Contents

Title Page.....	1
Disclaimer.....	2
Abstract.....	3
Table of Contents.....	4
Executive Summary.....	7
<b>1.</b> Introduction.....	13
<b>2.</b> Synthesis and Characterization of Nanoscale Molybdenum Sulfide Catalysts by Controlled Gas Phase Decomposition of Mo (CO) <sub>6</sub> and H <sub>2</sub> S.....	15
<b>3.</b> Screening of Alkali-Promoted Vapor-Phase-Synthesized Molybdenum Sulfide Catalysts for the Production of Alcohols from Synthesis Gas.....	35
<b>4.</b> Higher Alcohols from Synthesis Gas Using Carbon-Supported Doped Molybdenum-Based Catalysts.....	57
<b>5.</b> A Kinetic Model for the Synthesis of High-Molecular-Weight Alcohols over a Sulfided Co-K-Mo/C Catalyst.....	87
<b>6.</b> A Temperature Programmed Reduction Study of Alkali-Promoted, Carbon-Supported Molybdenum Catalysts.....	118
<b>7.</b> Background on Case Studies, Design, and Economics.....	151
<b>8.</b> Approach and Rationale.....	154
<b>8.1</b> Target Blends.....	154
<b>8.2</b> Choice of Cases.....	154
<b>8.3</b> Energy Park.....	157
<b>9.</b> Methodology.....	159
<b>9.1</b> Design.....	159
<b>9.1.1</b> Case Studies.....	159
<b>9.1.2</b> Scale of Operation.....	160

9.1.3	Available Technology.....	161
9.2	Economics.....	161
9.2.1	Assumptions.....	161
9.2.2	Measures of Economic Feasibility.....	163
9.3	Screening of Alternatives.....	164
10.	Description of Cases.....	165
10.1	Process Concept.....	165
10.2	Designs.....	165
11.	Results and Discussion.....	168
11.1	Cost Economics of Designs.....	168
11.2	Energy Efficiency of Designs.....	174
11.3	Fugitive Emissions.....	177
12.	Conclusions.....	178
13.	Recommendations and Future Work.....	180
13.1	Optimization.....	180
13.2	Sensitivity Analysis.....	180
13.2.1	Process.....	180
13.2.2	Cost and Price.....	180
13.3	Energy Park.....	181
13.4	Possible Additional Case Studies.....	181
14.	Appendices.....	184
	Appendix A Case 1: Texaco gasifier and steam reforming of natural gas.....	185

Appendix B	Case 2: Lurgi gasifier.....	246
Appendix C	Case 3: Natural gas only.....	261
Appendix D	Case 4: Texaco gasifier and sour gas shift converter.....	274
Appendix E	Case 5: Shell gasifier and sour gas shift converter.....	290
Appendix F	Case 6: Shell gasifier and steam reforming of natural gas.....	306
Appendix G	Case 7: Texaco gasifier and power production facility.....	322
Appendix H	Scale-up and comparison of design cases.....	338
<b>15.</b>	Critical Economics of Coal-Derived Alcohol Transportation Fuels.....	348
<b>16.</b>	Critical costs and Prices in Determining Coal –Derived Alcohol Fuel Economics.....	355
<b>17.</b>	Efficiency Criteria for Environmental Evaluation of Power Technologies.....	362
<b>18.</b>	The Performance Characteristics of C1-C5 Alcohol – Indoline Blends with Matched Oxygen Content in a Single Cylinder SI Engine.....	368
<b>19.</b>	Combustion Characteristics of Higher Alcohol/Gasoline Blends.....	377
<b>20.</b>	Emission Characteristics of Higher Alcohol/Gasoline Blends.....	410
