

TECHNOLOGY OF LIGNITIC COALS

Part 2 of Two Parts

by

Bureau of Mines staff, Grand Forks, N. Dak., and Washington, D. C.

CONTENTS

	<u>Page</u>
1. Combustion - power generation.....	1
Methods of firing.....	1
Underfeed stokers.....	2
Chain- and traveling-grate stokers.....	2
Spreader stokers.....	3
Pulverized fuel.....	8
Cyclone burners.....	17
Comparative survey of steam power plants burning North Dakota lignite.....	20
Construction and electrical production costs for lig- nite-burning power plants.....	25
Fluidized processing of North Dakota lignite for power production.....	26
Bibliography.....	30
2. Carbonization.....	33
Results of assay tests on North Dakota and other selected lignites.....	34
Process methods.....	43
Pilot and commercial plants for carbonizing American lignites.....	43
Lurgi-Spülgas process.....	45
Fluidized carbonization, Bureau of Mines, Denver, Colo.....	47
Investigations to produce coherent coke from lignite.....	54
German processes for carbonizing lignite and brown coal.....	56
Properties of low-temperature lignite tars.....	60
Uses for products from low-temperature carbonization of lignite.....	62
Bibliography.....	65

CONTENTS (Con.)

	<u>Page</u>
3. Gasification.....	67
Synthesis gas.....	67
Externally heated annular retort, Bureau of Mines, Grand Forks, N. Dak.....	68
Externally heated retort for pulverized coal, Battelle Memorial Institute.....	71
Koppers pulverized-fuel process.....	73
Bureau of Mines atmospheric-pressure gasifier, Morgantown, W. Va.....	73
Bureau of Mines pressure gasifier, Morgantown, W. Va.....	78
Lurgi pressure-gasification process.....	78
Texaco pressure-gasification process.....	82
General discussion of operating features.....	85
Pulverized coal.....	85
Pressure gasification.....	85
Internal and external heating.....	86
Steam requirements.....	88
Oxygen requirements.....	88
Capacities.....	88
Future and present uses of synthesis gas.....	88
Producer gas.....	89
Bibliography.....	91
4. Hydrogenation of lignite.....	93
Introduction.....	93
Commercial-plant operation.....	93
Laboratory investigation.....	94
Demonstration-plant operations.....	99
Liquid-phase hydrogenation.....	99
Description of coal.....	99
Processing.....	101
Performance of equipment.....	104
Vapor-phase hydrogenation.....	105
Bibliography.....	107
5. Other chemical processing.....	109
Activated carbon.....	110
Stain-type dyes and related products.....	111
Montan wax.....	113
Recovery of elements in ash.....	116
Controlled oxidation.....	118
Miscellaneous applications.....	119
Bibliography.....	120

TABLES

1. Summary of operating data, 1952, Minnkota station, Minnkota Power Cooperative, Inc., Grand Forks, N. Dak.....	8
2. Summary of operating data, 1952, W. J. Neal station, Cen- tral Power Electric Cooperative, Voltaire, N. Dak.....	17
3. Lignite-burning power plants in North Dakota, South Dakota, and Minnesota.....	21
4. Boiler, furnace, and stoker data for the larger steam- generating plants firing lignite.....	22

TABLES (Con.)

	<u>Page</u>
5. Comparative data of heat-release rates for boiler burning lignite and bituminous coal.....	23
6. Operating data for plants fired with lignite.....	24
7. Selected lignite power plants, production and operating costs.....	25
8. Overall heat and material flow rates for a 120,000-kw. generating plant using Garrison Damsite, N. Dak. lignite....	28
9. Overall dryer heat and material balances for a combined drying and carbonizing unit operating on Garrison Damsite, N. Dak., lignite and serving 40,000-kw. generating capacity.....	29
10. Overall carbonizer heat and material balances for a combined drying and carbonizing unit operating on Garrison Damsite, N. Dak., lignite and serving 40,000-kw. generating capacity.....	29
11. Proximate analyses of raw, dried, and carbonized Garrison lignite.....	30
12. Approximate comparative yields of high- and low-temperature carbonization processes.....	33
13. Results of assay-carbonization tests on North Dakota lignites by the Fischer method.....	37
14. Assay-carbonization yields of North Dakota lignites by Fischer assay method.....	38
15. Results of assay tests on other United States lignites by Fischer assay method.....	38
16. Results of assay tests on North Dakota lignites by modified distillation-assay apparatus.....	40
17. Results of assay tests on Texas lignites by modified distillation-assay apparatus.....	41
18. Comparative assay yields of North Dakota and Texas lignites, assay temperature 500° C.....	41
19. Yields of products of low-temperature carbonization of North Dakota lignite.....	42
20. Contraction in volume of charges of Velva lignite as mined in BM-AGA tests as a function of processing temperature..	42
21. Material balance for carbonization of lignite in inclined retort.....	44
22. Yield of products from lignites carbonized in 8-inch fluidized carbonizer.....	51
23. Chemical analyses of char.....	52
24. Physical properties of Garrison lignite and char.....	52
25. Composition of carbonization gases, 8-inch fluidized carbonizer.....	53
26. Distribution of potential heat per pound of lignite as charged, 8-inch fluidized carbonizer.....	53
27. Comparative figures for Kosag-Geissen and Borsig-Geissen retorts.....	59
28. Properties of typical low-temperature tar obtained by fluidized carbonization of lignite and subbituminous coal compared with properties of byproduct tar from coke ovens	61
29. Distribution of tar acids in primary tars.....	61
30. Properties of low-temperature primary tars obtained from fluidized carbonization of lignites.....	63
31. Properties of light oil from German brown-coal briquets....	64

TABLES (Con.)

	<u>Page</u>
32. Modern synthesis-gas processes.....	67
33. Typical results with externally heated retort, Bureau of Mines, Grand Forks, N. Dak.....	70
34. Heat transfer and operating data, externally heated retort, Bureau of Mines, Grand Forks, N. Dak.....	71
35. Operating data for Battelle externally heated gasifier....	72
36. Typical performance data for Koppers gasifier, Bureau of Mines, Louisiana, Mo.....	75
37. Results using the Morgantown atmospheric-pressure gasifier with dried, subbituminous C Lake de Smet coal.....	77
38. Comparative typical results of Morgantown pressure and atmospheric gasifiers.....	79
39. Test results of Lurgi pilot generator, Bureau of Mines, Pittsburgh, Pa.....	83
40. Capacity figures for various gasification processes.....	87
41. Performance data for updraft producers using lignite.....	90
42. Standard capacity for German producers.....	90
43. Ultimate analysis of coals on moisture- and ash-free basis.....	93
44. Product distribution, uncatalyzed hydrogenation for 1-hour reaction at 450° C. and 1,000 p.s.i.g. initial H ₂ pressure.....	96
45. Ultimate compositions of asphaltene, n-hexane soluble oil, and coal-hydrogenation gasoline.....	96
46. Product distribution of uncatalyzed and catalyzed Arkansas- lignite hydrogenation for 1 hour at 450° C. and initial hydrogen pressure of 1,000 p.s.i.g.....	96
47. Product distribution of uncatalyzed and catalyzed Washing- ton-lignite hydrogenation for 1 hour at 450° C. and initial hydrogen pressure at 1,000 p.s.i.g.....	97
48. Product distribution of uncatalyzed and catalyzed Beulah- lignite hydrogenation for 1 hour at 450° C. and initial hydrogen pressure of 1,000 p.s.i.g.....	97
49. Product distribution of uncatalyzed and catalyzed Velva- lignite hydrogenation for 1 hour at 450° C. and initial hydrogen pressure of 1,000 p.s.i.g.....	97
50. Effect of temperature on product distribution of catalyzed Beulah-lignite hydrogenation for 1 hour, using Mo cata- lyst and initial hydrogen pressure of 1,000 p.s.i.g.....	98
51. Effect of hydrogen pressure on product distribution of catalyzed Beulah-lignite hydrogenation for 1 hour, using Mo catalyst at 450° C.....	98
52. Product distribution of hydrogenated coals at 4,000 p.s.i.g. initial hydrogen pressure, 1-hour reaction at 450° C., using various catalysts.....	98
53. Ultimate compositions of total oils obtained from hydro- genation of Velva lignite and Rock springs coal.....	99
54. Amounts and characterization of products obtained from hydrogenated lignites in fluidized bed.....	100
55. Coal analyses - Velva, N. Dak., lignite.....	101
56. Operational and yield data - liquid-phase processing of Velva lignite.....	102
57. Typical analyses of process streams and products - liquid- phase hydrogenation of Velva lignite.....	103

TABLES (Con.)

	<u>Page</u>
58. Typical operation conditions - vapor-phase hydrogenation..	105
59. Typical yields - vapor-phase hydrogenation.....	106
60. Typical analyses of feed and product streams - vapor-phase hydrogenation.....	106
61. Properties of lignites mined for wax extraction.....	114
62. General properties of American montan wax.....	116
63. Extraction yields of selected lignites and subbituminous coals.....	117

ILLUSTRATIONS

Fig.

1. Traveling-grate-fired, steam-generating unit of 75,000- pound-steam-per-hour capacity at Devils Lake station, Otter Tail Power Co., Devils Lake, N. Dak.....	4
2. Performance of three steam generators fired by traveling- grate stoker, spreader stoker, and unit pulverizer.....	5
3. Percentage combustible in refuse as a function of boiler load during performance test on 135,000-pound-steam-per- hour boiler at Minnkota station, Grand Forks, N. Dak....	7
4. Percentage distribution of lignite refuse by weight and of combustible in refuse during tests on 72,000-pound- steam-per-hour boiler at Minnkota station, Grand Forks, N. Dak.....	9
5. Spreader-stoker-fired, steam-generating unit of 72,000- pound-steam-per-hour capacity at Minnkota station of Minnkota Power Cooperative Inc., Grand Forks, N. Dak....	10
6. Operating record for 72,000-pound-steam-per-hour capacity boiler at Minnkota station, Grand Forks, N. Dak.....	11
7. Pulverized-fuel steam-generating unit of 75,000-pound- steam-per-hour capacity at Crookston station, Otter Tail Power Co., Crookston, Minn.....	14
8. W. J. Neal station, Voltaire, N. Dak.....	15
9. Cross section of pulverized-fuel installation of 230,000- pound-steam-per-hour capacity at W. J. Neal station, Central Power Electric Cooperative, Inc., Voltaire, N. Dak.....	16
10. Cyclone-burner-fired, steam-generating unit of 180,000- pound-steam-per-hour capacity at Calumet station, Commonwealth Edison Co., Chicago, Ill.....	19
11. Calculated fuel requirements for 120,000-kw. power plant..	27
12. Modified distillation assay apparatus.....	35
13. Low-temperature carbonization yields in laboratory pre- cision assay from Sandow lignite.....	36
14. Diagram of Lurgi carbonizer.....	46
15. Pilot plant for fluidized carbonization of noncoking coal; capacity, 250 to 300 pounds per hour.....	49
16. 8-inch fluidized carbonizer, Denver, Colo.....	50
17. Comparison of tar-plus-light-oil yields from 500° C. Sandow lignite assay with pilot plant and 500° C. char assay.....	55
