CALCULATIONS OF GAS UTILIZATION AND THE COURSE OF SYNTHESIS
DURING THE HYDROGENATION OF CARBON MONOXIDE

by Otto Roelen

Part I

Introduction

	Page
1. Introduction to the mathematical method of treatment.	3
2. Selection of auxiliary figures and characteristic numbers.	4
3. Explanation of symbols.	8

Part II

Computation of Hydrocarbon Formation from the Data of Gas Analyses.

A. Three basic assumptions in all computations of gas analyses.	10
B. Algebraic expression of the three assumptions.	11
1. The two basic stoichiometric equations and their solution.	11
2. Computation of intermediate values.	14
3. Computation of the residual volume from the nitrogen content.	15

	Page
4. The n - E equation	16
5. Applicability and range of validity of the relationship between the auxiliary and intermediate values.	18
C. Calculation of characteristic numbers.	
1. Conversion and consumption ratio	26
2. Formation of methane	26
a. Computation of the pure methane content in the end gas.	28
b. Approximate values for the factor β	30
c. Determination of the formation of methane.	33
3. Yield of higher hydrocarbons	34

Part III.

Determination of the Hydrogen-Carbon Monoxide ratios and the Oxygen-Containing groups in the products.

A. Reasons for extending the evaluations.	38
B. The calculation of the oxygen-containing groups from results of gas analyses.	39
C. Chemical investigation of the products formed.	40
1. Combustion	40
2. Precision distillation and chemical analysis.	41

Part IV.

Application of the Formulas Derived.

A. Evaluation from gas analyses and the syntheses data.	45
1. General course of calculations.	46
2. Testing the results.	46
a. Testing the basis.	46
b. Proof of the formation of carbon dioxide.	49
c. Cancellation of errors.	51
d. Testing for the errors of computations.	52
3. The use of blank forms	53
a. Preliminary computations after the course of the synthesis.	54
b. Uniform use of abbreviations and characteristic numbers.	54

Appendix

Explanation of symbols	60
Collection of formulas	63
