Preface, by L. J. E. Hofer	1	Method and apparatus	29
Acknowledgments	2	Free carbon	30
Foreword, by L. J. E. Hofer	3	Carbide carbon	33
Introduction to carbides of iron and their physical and chemical properties	3	Oxygen content of carburized catalysts	37
Cementite	6	Hydrogen reduction of a carburized-iron catalyst	40
Martensite	8	Summary	40
Austenite with dissolved carbon	8	Effect of carburization of iron catalysts upon their activity during medium-pressure synthesis	40
Ferrite with dissolved carbon	8	Effect of carbide carbon on activity of iron catalysts	40
Carbide of Brill and Mark	9	Formation of free carbon on iron catalysts	45
Carbide of Hofmann and Groll	9	Summary	47
Carbide of Tutiya	9	Thermomagnetic analysis	47
Carbide of Ilalle and Herbst	9	Description of magnetic balance	47
Carbide II of Pichler and Merkel	9	Preliminary experiments	50
Carbide of Bahr and Jessen	10	Formation and stability of higher iron carbides	51
Carbide of Hägg	11	Carburization of iron catalysts for medium-pressure synthesis	58
Carbide of Jack	11	Carburization of iron oxide	60
Cubic iron sesquioxide of LeClerc and Lefebvre	11	Carburization of an alkali-ized iron catalyst	62
Carbide I of Pichler and Merkel	11	Carburization of an alkali-ized iron catalyst containing copper	63
Carbide of Durand	12	Behavior of iron catalysts during hydrocarbon synthesis	71
Summary	12	Medium-pressure synthesis	71
Appendix	15	Atmospheric-pressure synthesis	82
Introduction	16	Effect of carbide content on catalyst activity	96
Review of literature	17	Summary	97
Heterogeneous catalysis	17	Mechanism of the synthesis	98
Fe-C-O system (excluding higher iron carbides)	19	Discussion of experimental results and summary	99
Formation of higher carbides by action of carbon monoxide on iron	22	Indexes	101
Thermomagnetic study on carburized iron	25		
Summary	26		
Experimental part	28		
Chemical study	28		
Carburization of iron catalysts prior to medium-pressure synthesis	28		
Methods and apparatus	28		
Acid decomposition of iron catalysts carburized under various conditions	29		

ILLUSTRATIONS

			Page
Fig. 1. Equilibria in the system iron-carbon-oxygen			20
2. Apparatus for carburization of iron catalysts			28
3. Apparatus for acid decomposition of iron catalysts			29
4. Free carbon deposition on alkali-ized-iron catalyst at 325°C. and 0.1 atmosphere, 40 liters CO per hour per 10 grams Fe			32
5. Carbide formation on alkali-ized-iron catalysts during 25 hours carburization at 0.1 atmosphere, 4 liters CO per hour per 10 grams Fe			34
6. Carbide formation on alkali-ized-iron catalyst at 325°C. and 0.1 atmosphere, 40 liters CO per hour per 10 grams Fe			36

Fig.	Page
7. Carbon dioxide content of tail gas during carburization of an alkali-iron catalyst at 325° C. and 0.1 atmosphere, 4 liters CO per hour	38
8. Oxygen content of an alkali-iron catalyst during carburization at 325° C. and 0.1 atmosphere, 40 liters CO per hour	39
9. Hydrogenation of 10.060 grams of carburized, alkali-promoted (0.25 percent K ₂ CO ₃) catalyst at 263° C. and atmospheric pressure, 0.8 liter H ₂ per hour	41
10. Simplified schematic diagram of magnetic balance	43
11. Detail of sample holder and water-cooled furnace	49
12. Hydrogen reduction of Fe ₂ O ₃ at 500° C. in the magnetic balance	50
13. Thermomagnetic curve of electrolytic iron	51
14. Thermomagnetic curve of carburized, alkali-promoted iron catalyst	52
15. Thermomagnetic curve of alkali-promoted (0.25 percent K ₂ CO ₃) catalyst, reduced for 240 hours at 250° C., 1 liter H ₂ per hour per 20 grams Fe; carburized for 219 hours at 220° C., 1 liter CO per hour per 20 grams Fe	53
16. Thermomagnetic curve of Fe, Cu, K ₂ CO ₃ (100 : 1 : 1.5) catalyst, reduced for 240 hours at 250° C. with 1 liter H ₂ per hour per 20 grams Fe; carburized for 219 hours at 220° C. with 1 liter CO per hour per 20 grams Fe	54
17. Thermomagnetic curve of Fe, Cu, K ₂ CO ₃ (100 : 1 : 0.25) catalyst, carburized at 205° C.	55
18. Thermomagnetic curve of Fe, Cu, K ₂ CO ₃ (100 : 1 : 0.25) catalyst, carburized at 205° C. and then heated to 800° C. prior to thermomagnetic analysis	56
19. Thermomagnetic curve showing thermal instability of higher iron carbides, obtained by carburization at 205° C.	57
20. Thermomagnetic curve of unpromoted iron oxide, after carburization for 12 hours at 325° C. and 0.1 atmosphere, 8 liters CO per hour per 10 grams Fe	59
21. Thermomagnetic curve of unpromoted iron oxide, after carburization for 25 hours at 325° C. and 0.1 atmosphere, 8 liters CO per hour per 10 grams Fe	60
22. Thermomagnetic curve, after heating to 800° C., of unpromoted iron oxide which had been carburized for 25 hours at 325° C. and 0.1 atmosphere, 8 liters CO per hour per 10 grams Fe	61
23. Thermomagnetic curve of alkaliized (0.25 percent K ₂ CO ₃) iron oxide, after carburization for 5 hours at 325° C. and 0.1 atmosphere, 8 liters CO per hour per 10 grams Fe	62
24. Thermomagnetic curve of alkaliized (0.25 percent K ₂ CO ₃) iron oxide, after carburization for 12 hours at 325° C. and 0.1 atmosphere, 8 liters CO per hour per 10 grams Fe	63
25. Thermomagnetic curves of alkaliized (0.25 percent K ₂ CO ₃) iron oxide, after carburization for 25 hours at 325° C. and 0.1 atmosphere, 8 liters CO per hour per 10 grams Fe	64
26. Thermomagnetic curve of Fe, Cu, K ₂ CO ₃ (100 : 1 : 1.5) catalyst, after carburization for 0.5 hour at 325° C. and 0.1 atmosphere, 8 liters CO per hour per 10 grams Fe	65
27. Thermomagnetic curve of Fe, Cu, K ₂ CO ₃ (100 : 1 : 1.5) catalyst, after carburization for 5 hours at 325° C. and 0.1 atmosphere, 8 liters CO per hour per 10 grams Fe	66
28. Thermomagnetic curve, after heating to 800° C., of Fe, Cu, K ₂ CO ₃ (100 : 1 : 1.5) catalyst which had been carburized for 5 hours at 325° C. and 0.1 atmosphere, 8 liters CO per hour per 10 grams Fe	67
29. Thermomagnetic curve of Fe, Cu, K ₂ CO ₃ (100 : 1 : 1.5) catalyst, after carburization for 12 hours at 325° C. and 0.1 atmosphere, 8 liters CO per hour per 10 grams Fe	68
30. Thermomagnetic curves of Fe, Cu, K ₂ CO ₃ (100 : 1 : 1.5) catalyst, after carburization for 25 hours and 62 hours at 325° C. and 0.1 atmosphere, 8 liters CO per hour per 10 grams Fe	69
31. Thermomagnetic curve of Fe, Cu, K ₂ CO ₃ (100 : 1 : 0.25) catalyst, treated for 24 hours at 100° C. with synthesis gas (1 CO + 2 H ₂ mixture)	70

Fig.	Page
32. Thermomagnetic curve of Cu- and alkali-promoted iron catalyst, carburized for 24 hours at 325° C. and 0.1 atmosphere, 8 liters CO per hour per 20 grams Fe	72
33. Thermomagnetic curve of Cu- and alkali-promoted iron catalyst, carburized for 24 hours at 325° C. and 0.1 atmosphere, 8 liters CO per hour per 20 grams Fe and used for synthesis for 2.5 hours at 235° C. and 11 atmospheres	73
34. Thermomagnetic curve of Cu- and alkali-promoted iron catalyst, carburized for 24 hours at 325° C. and 0.1 atmosphere, 8 liters CO per hour per 20 grams Fe and used for synthesis for 6.5 hours at 235° C. and 11 atmospheres	74
35. Thermomagnetic curve of Cu- and alkali-promoted iron catalyst, carburized for 24 hours at 325° C. and 0.1 atmosphere, 8 liters CO per hour per 20 grams Fe and used for synthesis for 18.5 hours at 235° C. and 11 atmospheres	75
36. Thermomagnetic curve of Cu- and alkali-promoted iron catalyst, carburized for 24 hours at 325° C. and 0.1 atmosphere, 8 liters CO per hour per 20 grams Fe and used for synthesis for 40 hours at 235° C. and 11 atmospheres	76
37. Thermomagnetic curve of Cu- and alkali-promoted iron catalyst, carburized for 24 hours at 325° C. and 0.1 atmosphere, 8 liters CO per hour per 20 grams Fe and used for synthesis for 62 hours at 235° C. and 11 atmospheres	77
38. Thermomagnetic curve of Cu- and alkali-promoted iron catalyst, carburized for 24 hours at 325° C. and 0.1 atmosphere, 8 liters CO per hour per 20 grams Fe and used for synthesis for 109 hours at 235° C. and 11 atmospheres	78
39. Thermomagnetic curve of Cu- and alkali-promoted iron catalyst, carburized for 25 hours at 325° C. and 0.1 atmosphere, 8 liters water gas per hour per 40 cc. catalyst, and used for synthesis for 54 hours at 215° C. and 12 atmospheres	79
40. Thermomagnetic curve of Cu- and alkali-promoted iron catalyst, carburized for 25 hours at 325° C. and 0.1 atmosphere, 8 liters water gas per hour per 40 cc. catalyst, and used for synthesis for 410 hours at 215° C. and 12 atmospheres	80
41. Thermomagnetic curve of Fe, Cu, K ₂ CO ₃ (100 : 20 : 1.5) catalyst, heated in synthesis gas at 1 atmosphere until an exothermic reaction occurred	81
42. Thermomagnetic curve of Cu- and alkali-promoted (0.25 percent Cu) iron catalyst, after heating to 235° C. in synthesis gas at 1 atmosphere (time, 90 minutes)	82
43. Thermomagnetic curve of Cu- and alkali-promoted (0.25 percent Cu) iron catalyst, heated to 235° C. in synthesis gas at 1 atmosphere and kept at that temperature (total time, 4 hours 40 minutes)	83
44. Thermomagnetic curve of Cu- and alkali-promoted (0.25 percent Cu) iron catalyst, heated to 235° C. in synthesis gas at 1 atmosphere and kept at that temperature (total time, 49 hours)	84
45. Thermomagnetic curve of Cu- and alkali-promoted (0.25 percent Cu) iron catalyst, heated to 235° C. in synthesis gas at 1 atmosphere and kept at that temperature (total time, 120 hours)	85
46. Thermomagnetic curve of Fe, Cu, K ₂ CO ₃ (100 : 20 : 0.25) catalyst, heated to 235° C. in synthesis gas at 1 atmosphere and kept at that temperature (time, 17 hours)	87
47. Thermomagnetic curve of Fe, Cu, K ₂ CO ₃ (100 : 20 : 0.25) catalyst, heated to 235° C. in synthesis gas at 1 atmosphere and kept at that temperature (time, 47.5 hours)	88
48. Thermomagnetic curve of Fe, Cu, K ₂ CO ₃ (100 : 20 : 0.25) catalyst, heated to 235° C. in synthesis gas at 1 atmosphere and kept at that temperature (time, 121 hours)	89
49. Thermomagnetic curve of Fe, Cu, K ₂ CO ₃ (100 : 20 : 1.5) catalyst, treated for 24 hours at 225° C. with synthesis gas (20 liters 1CO + 2H ₂ gas mixture per hour per 40 cc. catalyst)	90
50. Thermomagnetic curve of Fe, Cu, K ₂ CO ₃ (100 : 20 : 1.5) catalyst, treated for 3 days at 225° C. with synthesis gas (20 liters 1CO + 2H ₂ gas mixture per hour per 40 cc. catalyst)	91

Fig.	Page
51. Thermomagnetic curve of Fe, Cu, K ₂ CO ₃ (100 : 20 : 1.5) catalyst, treated for 6 days at 225°C. with synthesis gas (20 liters 1 CO + 2H ₂ gas mixture per hour per 40 cc. catalyst) -----	92
52. Thermomagnetic curve of Fe, Cu, K ₂ CO ₃ (100 : 20 : 1.5) catalyst, treated for 4 days at 225°C. and 1 atmosphere of synthesis gas (20 liters 1CO + 2H ₂ gas mixture per hour per 40 cc. catalyst), and then 2 days at 220°C. and 1 atmosphere water gas (4 liters per hour per 40 cc. catalyst) -----	93
53. Thermomagnetic curve of an active catalyst used for synthesis at atmospheric pressure and poisoned by extraction with sulfur-containing Diesel oil -----	94
54. Thermomagnetic curve of Fe, Cu, K ₂ CO ₃ (100 : 20 : 0.25) catalyst at high activity -----	95
55. Thermomagnetic curve of Fe, Cu, K ₂ CO ₃ (100 : 20 : 0.25) catalyst at low activity -----	96
56. Thermomagnetic curve of an active catalyst after reduction with H ₂ at 400°C. -----	97
