ACKNOWLEDGEMENTS

The genesis of this book was the Ninth Annual International Conference on Coal Gasification, Liquefaction and Conversion to Electricity (COGLAC) held on August 3-5, 1982. Although the conference was sponsored by the Department of Chemical and Petroleum Engineering, University of Pittsburgh and the Pittsburgh Energy Technology Center, U.S. Department of Energy, its success must also be attributed to the many individuals across the country who have generously given their time to help in the coordination of COGLAC.

To list all persons who have contributed to the success of COGLAC would be impossible, therefore it is restricted to those involved in developing the technical program and material which made this book possible. The following individuals deserve special thanks: Messrs. Alan J. Brainard and James F. Boyer, the COGLAC managing co-chairmen, Charles A. Stokes, Advisory Board Chairman, George Struzyna, International Chairman, and, Charles S. Beroes, Founding Chairman. Special thanks also go to Messrs. J. Sudbury, I. Wender, R. Davies, P. Winter, M. Cook, M. Johnson, S. Kasper, W. Corder, C. Stokes, B. Blythe, J. Mullan and J. Boyer, session organizers, and to Dr. Sun Chun, Director, Pittsburgh Energy and Technology Center and Dr. Y. T. Shah, Chairman, Chemical and Petroleum Engineering Department for their encouragement and support.

Finally, thanks go to James Cobb for his advice in coordinating this book, to Leda Mance for her excellent typing skills and to Kerry Warren-Couch for her coordinating efforts which make this book possible.
