

Index to Microfilms of Dr. M. Pier

	<u>Pages</u>
IX Diesel Oil	
Higher Flash Point Diesel Oil	1 - 11
X Economics	
Cost of aviation gasoline from Pitch. Complete cost breakdown	12 - 28
Estimates of costs of aviation gasoline from Rumanian oil in Pölitz	29 - 37
XI Fischer-Tropsch	
State of the Synal Process in June 1941	38 - 42
Synthesis with Iron Catalysts	43 - 44
Patents for production of hydrocarbon fluids from gaseous carbon compounds	45 - 49
Organic materials in the product liquor of the foam process	50 - 51
Equilibria in Fischer-Tropsch	52 - 53
Operating Report of a small plate foam converter in the Fischer Tropsch process	54 - 59
The alcohol synthesis. Discussion	60 - 62
Running the Synthesis to Alcohols, Fatty Acids and Sulfonates	63 - 64
The state of the Fischer Tropsch art, July 1941 Same Jan. 1942	65 - 82
Replacing Cobalt by Iron	83 - 93
Alcohol Synthesis from CO : H ₂ by means of the hot gas recirculation process	94 - 97
Settling of finely divided Catalyst on the Converter wall in the Foam process	98 - 103
Synthetic oil experiments, Feb. 1942	104 - 105
State of CO - H ₂ Synthesis in April 1941	106 - 109
XII Fuel Evaluation	
Report on Exchange of Experience on Inspection of Aviation Gasoline	110 - 113
Knock-limit curves	114 - 125
Remarks of From Herz on the calculation of overload curves	126 - 128

XII Fuel Evaluation

Pages

Discussion concerning quality of aviation Gasoline	129 - 134
Lead Susceptibility of CV ₂ b	135 - 139
Octane number of very low endpoint gasoline	140 - 141
Knock curves of alcohol-gasoline mixtures	142 - 147
Comparison between the Knock Limit Curves ((Oppau Method) with the Overload Curve (DVL Method)	148 - 155
A specification for aviation gasoline	156 - 157
Knock tests with aromatic mixtures	158 - 167

XIV General

Difference between various methods of "upgrading" coal (i.e. to oils of higher value)	168 - 179
On Destructive Hydrogenation (Russian article by P.W. PUTSCHKOW)	180 - 215
Theory of the Ammonia Catalysts. Work of the I.G.	216 - 223
Bauxite residues of the Al ₂ O ₃ preparation	224 - 226
Drying of coal in Belgium	227 - 228
Briquetting with hydrogenation residues	229
Avoiding employment of people with foreign affiliations	230

XV Instrumentation

Brief summary of High Pressure Instrumentation applications	231 - 232
Use of H and B regulators for temperature control	233 - 236

XVI Liquid Phase Hydrogenation

Decreasing the Preheater Load	237 - 239
Paste Exchange	240 - 242
Installing Carbonization Plants in Connection with Hydro Plants	243 - 244
Adding very hot hydrogen to Moderately heated paste before Hydrogenation	245 - 247
Research Report. Running Silesian Coal K1160 to Gasoline and Middle Oil at 600 Atm. in 10 liter Converter	248 - 273

XVI Liquid Phase Hydrogenation

Pages

On the Chemical Composition of Preheater Incrustation	274 - 276
Decreasing the Liquid Phase preheater load	277 - 287
Research Report. Running Silesian Coal K1197 to Gasoline and Middle Oil at 600 atm	288 - 379
Possible substitutes for NH_4Cl in hydrogenating Ruhr Coal	380 - 382
Exchange of experience on use of a fifth converter	383 - 385
Applying small scale results to hydrogenation of Upper Silesian Coal at Blechhammer	386 - 389
Use of a tin - containing dust as Catalyst	390 - 391
Occurance of a Caviar like formation in #1 Converter during the large scale work on Fuel Oil Production	392 - 394
Means of Producing Fuel Oil	395 - 397
Research Report. Running Scholven Coal with Chlorine added in various ways Tin Oxalate, to Gasoline and Middle Oil in 10 liter Converter	398 - 444
Research with Rhenish Brown coal in one liter Converter. Neutralization of Coal and Settling Operations	445 - 448
Caviar formation	449 - 450
Autoclave work on Scholven Coal	451 - 452
Autoclave work on upper Silesian Coal	453 - 455
Caviar formation from Rhenish Brown Coal in 10 liter Converter	456 - 461
How Compositions of products vary with Nature of operations in bituminous coal hydrogenation	462 - 464
Comparative hydrogenability of various kinds of coal	465 - 467
Liquid phase catalysts	468 - 471
Autoclave work on Puertellano Coal	472 - 476
Table. Results of large Pilot Plant work to produce Gasoline and varying amounts of fuel oil	477
Autoclave work on Brux Tar	478 - 483
Running bituminous coal and bituminous coal high temperature tar	484 - 505

XVI Liquid Phase Hydrogenation

Pages

Research Report. Running Silesian Coal K1174 to an excess of heavy oil at 600 atm in 10 liter converter	506 - 536
Previous results on hydrogenation with elementary sulfur on various raw materials	537
H.O.L.D. filtration research with several solvent additives	538 - 539
Reports on Kipp filter research with TTH separator residue	540 - 559
Report on Revolving Filter Research with TTH separator residue	560 - 571
Hydrogenation of old coals	572
TTH treatment of Deuben Carbonization Tar	573 - 578
Running old Gelsenberg coal to gasoline and middle oil at 600 atm	579 - 593
Research report. Running German crude in 10 liter converter	594 - 628
Operation exchange of experience	629 - 643
Gasification when running silesian bituminous coal and tar therefrom to heavy oil at 600 atm	644 - 645
Substituting NH_4Cl with Scholven Coal. (Autoclave work at 350 atm)	646 - 648
Fuel Oil discussion (Gelsenberg 1942)	649 - 652
Cold paste injection at Scholven	653 - 654
Comparison of HOLD tests	655 - 657
Fuel oil and electrode coke	658 - 661
Liquid phase treatment of HOLD at 600 atm	662 - 665
Saving Mo in the liquid phase	666 - 668
Scholven Coal at 600 atm with iron and chlorine catalyst	669 - 671
Research report. Addition of Na_2S in bituminous coal hydrogenation	672 - 699
Research report. Running Silesian Coal pasted with tar from Silesian Coal to a low excess of heavy oil at 600 atm in 10 liter converter	700 - 720

XVI Liquid Phase Hydrogenation	<u>Pages</u>
Table showing liquid phase. LPG distribution when running Silesian coal to heavy oil excess	721 - 722
Iron-oxide catalysts at various temperatures	723 - 725
Processing C - rich bituminous coal	726
Coal as catalyst in hydrogenation of pitch-tar mixtures (autoclave work)	727 - 729
Catalyst research for pitch-tar mixture	730 - 731
Extraction of Primary bitumen depending on the age of the coal	732 - 734
Coal extraction discussion at Ruhrol	735 - 737
Investigation of Solvent extraction at Lutzkendorf	738 - 741
Investigation of the Phenol extraction outfit at Lutzkendorf	742 - 771
Extraction research in autoclaves for production of primary bitumen	772 - 781
X-ray investigation of Caviar	782
Filter research in 1937	783 - 788
Further Results of Filter research of hydrogenation residues	789 - 790
Use of hydrogenation pitch as a briquetting material for bituminous coal	791 - 797
Running bituminous coal and carbonization tar to briquetting material and asphalt free oil	798 - 840
Blechhammer briquetting research	841 - 842
Coking hydrogenation residues in mixture with coal in loose condition	843 - 855
Group analyses of Abschlamm	856 - 877
Liquid phase catalyst tests in rotating autoclaves	878 - 883
H.O.L.D. heat exchange	884 - 896

XVII Liquor Treatment

Research to recover phenols from waste waters of hydro plants thru use of steam	897 - 923
Processing residue oil from liquor treatment	924 - 925
Working up the Creosote oil obtained from the tri-cresyl-phosphate liquor process	926 - 938
