

INDEX -- MICROFILM REEL 187  
(Original designation Navy 5883-4)

Lurgi Files - Cont'd.

Gasification of lignite under pressure utilizing oxygen and steam	3149-3156
Miscellaneous	3157-3199
Experiments carried out on seven oil shales in the pilot plant at Frankfurt	3200-3249
Flow chart of the Schweitzer pilot plant at Metzingen	3250-3251
Frommer project	3252-3289
Oil shale resources in Wurttemberg	3290-3354
Electric tar precipitation system	3355-3359

Schweitzer Process

Description of the Schweitzer method for the determination of oil content of oil shale in the laboratory	3360-3367
Various methods for determining oil content of oil shale	3368-3385
Patent application concerning the Schweitzer process for oil shale carbonization	3386-3392
Shale resources in Wurttemberg	3393-3396
Proposals concerning oil shale carbonization without application of furnaces	3397-3401
Development of the Schweitzer process:	
Results of test made in Lurgi pilot plant	
Results of test made in Geissen furnace in 1925	
Results of test made in distillation unit 1918	3402-3468
Corrosion tests	3469-3546
Frommern plant	3547-3549
Correspondence concerning oil shale projects in Estonia, Bulgaria and France	3550-3552
Layout plan of the Frommern plant	3553-3554
Building for the furnaces - Frommern plant	3555-3556

FRAME NOS.Lias Frommern

Oil content of Schandelah shale	3557-3560
Miscellaneous correspondence	3561-3592
Correspondence concerning Frommern project	3593-3649
Schweitzer process applied to Estonian shale	3650-3662
Proposal for an alteration of the Schweitzer process	3663-3670

Otto Process

Development of oil shale carbonization heat balances	3671-3676
Patent concerning furnace and arrangement of low temperature carbonization of oil shale	3677-3682
Drawing of the furnace - heat balance	3683-3685
Drawing containing some cross sections of the Otto furnace	3686-3687
Calculations concerning some improvements of the process; improved heat efficiency of the process	3688-3705
Drawing showing the arrangement of the Dotternhausen carbonization plant; cross section of the furnace	3706-3707
Flow chart of the improved Otto process	3708-3709
Report of some experiments carried out at Dotternhausen	3710-3718
Heat consumption of oil shale carbonization	3719-3729

Dotternhausen Plant

Some experiments to lower the pour point of diesel fuel	3730-3731
Shale as raw material for the manufacturing of cement, bricks, mortar, and insulating material	3732-3741
Oil shale	3742-3754
Pile carbonization: composition of some oils	3755-3756
Pile carbonization of oil shale	3757-3762
Kablitz furnace for carbonization of oil shale	3763-3764
Graf carbonization process - Schorzingen project	3765-3777
Experiments concerning the extraction of oils from oil shale by means of high boiling oils	3778-3782
Low temperature carbonization of oil shale utilizing a revolving furnace	3783-3790
Low temperature carbonization of solid fuels and manufacturing of liquid fuels	3791-3801
Graf furnace - rough sketch	3802-3803
Ichthyol.	3804-3823
Zur Palaeogeographie und Bitumenfuehrung des Posidonienschiefers im Deutschen Lias	3824-3886
Kablitz furnace - rough sketch	3887-3888
Description of the tunnel oven for low temperature carbonization of oil shale	3889-3895
Composition of shale bed near Brunswick	3896-3898

Literature

Processes for the extraction of H <sub>2</sub> S from gases	
Methods for the determination of sulphur in gases & oils	
Methods for the extraction of sulphur from oils	3899-4013
Distillation methods for oils and tars	4014-4034
Concerning peat	4035-4103
Mining of ores by heating rocks	4104-4106
Experiments carried out to extract oil shale by means of tetraline	4107-4117
Description of oil shale deposits, methods for carbonization, properties of the shale oils	4118-4148
Process and arrangements suitable for low temperature carbonization	4149-4155
Miscellaneous pharmaceutical reports	4156-4181
Miscellaneous literature concerning oil shale	4182-4187
Literature concerning oil shale in various countries	4188-4204
Correspondence concerning some trips of Dr. Meier-Grolmar to Sweden, Denmark, Estonia and France	4205-4247
Oil shale: Albania, Bulgaria, Croatia, Australia, Turkey, Norway, Yugoslavia, Tangier and Greece	4248-4252
Oil shale: Spain	4253-4260
Correspondence concerning a visit of Spanish engineers	4261-4268
Underground gasification in Russia	4269-4275
Russian petroleum oils	4276-4290
Oil shale: Russia	4291-4293
Oil shale: Europe	4294-4297
Oil shale: Estonia	4298-4326
Reports dealing with the capacity, oil yields, and gasoline yields of the Autun plant	4327-4352
Description of the St. Hilaire-furnace, France	4353-4357
Oil shale: France	4358-4365
Oil shale carbonization in Tangier	4366-4367
Oil shale: Italy	4368-4374
Oil shale: England	4375-4381
Oil shale: South Africa	4382-4388
Oil shale: Sweden	4389-4413
Description of the Bergh process - Sweden	4414-4423
Paper clippings concerning oil shale carbonization in Sweden	4424-4426
Development of oil shale carbonization in Sweden	4427-4434
Bergh process in Sweden	4435-4442
Composition of the liberated gases utilizing the Bergh process in Sweden	4443-4449
Oil shale: Manchuria	4450-4452
Oil shale: Brazil	4453-4456
Stuttgart Mannheim - geological map	4457-4458
Goppingen - geological map	4459
Rottweil Tuttlingen - geological map	4460
Ulm - geological map	4461
Map showing oil concessions in Austria	4462
