

INDEX - MICROFILM REEL 218  
(Original designation Navy 5999-9)

(Part of this film illegible)

1. Sludge filtration with different solvents.
2. Sludge filtration with aldehydes.
3. Ash-free electrode coke preparation.
4. Economics of catalyst 5058.
5. Letters to Dr. Pier.
6. Analysis of the Sump Phase.
7. Determination of aromatics by the aniline point method. Effect of olefins.
8. Miscibility of tars, pitches, etc.
9. Gas preheaters.
10. Coating of high pressure mantels.
11. Experiment with the Laval centrifuge.
12. Cooling systems.
13. Mineral oil specialty products (Steinbock).
14. Miscellaneous experience exchanges, teletypes, production plans and figures.
15. Production of Kybol and Paraflow.
16. Fuels for the C<sub>3</sub> motor.
17. Listing of problems in experience exchanges (90 problems in high pressure hydrogenation from 12/13/40 to 11/10/44).
18. High pressure armatures at Ludwigshafen (extensive).
19. Fuel for jet planes
20. Paraflow as a pour point depressor - series of papers on process.
21. Thermal elements in the high pressure ovens.

22. Gas hydrates, a literature survey and summary (9 pages).
23. Control of pressure drop due to plugging up in the high pressure chamber.
24. Gas hydrates. (extensive).
25. Nitrated and hardened plungers.
26. "Carvear" removal in Sump phase ovens.
27. Tar centrifuging.
28. Analytical procedure for determinations of basic nitrogen in middle oils by titration with perchloric acid in glacial acetic acid (5 pages).
29. Catalyst comparisons (5058 vs. 7846 W 250).
30. Temperature effects on hydrogenation with the above catalysts.
31. The sump phase preheater.
32. Miscellaneous coal hydrogenation reports (briquetting, etc.)
33. Hydrogenation of diisobutylene.
