

INDEX - MICROFILM REEL 233
(Original designation 37-E)

	<u>FRAME NOS.</u>
Welding with the Ellifa welding machine E IV	4 - 51
Oxygen and nitrogen generating plants.	52 - 64
Hydrogen generating plant.	65 - 73
Coke oven gas separation plant.	74 - 82
Large scale oxygen plants.	83 - 88
The Linde-Frankl process for the separation of gas mixtures. Reprint from "Mitteilungen aus den Forschungsanstalten des Gutehoffnungshuttenkonzerns", Vol. 4, No. 1, Dipl.- Ing. C. P. Hochgesand, August 1935.	89 - 94
Linde gas liquefying plants. Collection of diapositives without accompanying texts which illustrate curves and equations on course of temperature and heat ex- change in regenerators calculation of blast heaters, efficiency of heat exchangers in parallel-flow cross current and in counterflow, return liquefaction of gas mixtures, surrounding heat losses and course of temperature with countercurrent heat exchangers, ascertaining coefficient of heat transmission in regenerators, graphic curves on gas decomposition by means of centrifuges and graphical curves for the equilibrium of gas mixtures expressed in thermal percentages.	
Designs and diagrams, 1938-1942. Linde- Eismaschinen A. G.; Hollriegelkreuth.	95 - 173
Linde gas liquefying plants. A collection of diagrams and tables on Linde liquefaction plants. Curves are given for steam pressure, solubility, melting and boiling point, equilibrium of gases, calibration of instruments and shearing stress-strain diagrams for fittings, etc., on the whole, presumably this data is for the works' engineer. Accompanying texts are not at hand.	174 - 724
