

INDEX - MICROFILM Reel 242
(Original designation BM-29)

REPORT
NO.

- 1 Hydrogenation at high pressure - present status and possibility of future development. Dr. Erich Frese. 22 pp.
- 2 New hot separator for high pressure hydrogenation operating without deposit formation or coking. Dr. Erich Frese. 5 pp. with drawings.
- 3 Operation problems in high pressure hydrogenation. Dr. Erich Frese. 10 pp.
- 4 Status of recent research work on hydrogenation with fixed catalyst at 700 atmospheres. Hydrogenation of Middle Oil. Dr. Erich Frese. 14 pp.
- 5 Filtration experiments with hydrogenation residue (Abschlamm). Dr. Erich Frese. 5 pp.

REPORT
NO.

- 6 Present status of Pott-Broche (coal extraction) Process.
Dr. Erich Frese. 9 pp. with drawings.
- 7 High pressure hydrogenation gases. Donath. 8 pp.
- 8 Production of liquid fuels from coal, lignite, and oil
shale in Europe. O. Hubmann. 111 pp. and drawings.
- 9 Production of synthesis gas from Wyoming sub-bituminous
coal. O. Hubmann. 23 pp. and drawings.
- 10 Lurgi carbonizer with gasification of residue.
O. Hubmann. 7 pp.
- 11 Spreader for charging of Lurgi-Schweitzer retort.
O. Hubmann. 1 p. and drawing.
- 12 Tunnel kilns for carbonization of oil shale. O. Hubmann.
12 pp.
- 13 Lurgi Huboven for carbonization and gasification of high
ash fuel. O. Hubmann. 10 pp., drawing and photo.
- 14 Purpose and contents of short textbook on the technology
of fuels. Ernst G. Graf. 18 pp.
- 15 Contributions to gas producer theory. Ernst G. Graf.
24 pp.
- 16 Graphical representation of gas producer processes.
Ernst G. Graf. 10 pp., and drawings.
- 17 Gas and fuel testing methods and apparatus developed
at the Institute of Technology and Fuels at Vienna.
Ernst G. Graf. 5 pp.
- 18 Coal carbonization in the laboratory. Oppelt. 16 pp.
and drawings.
- 19 Low temperature carbonization of slightly caking coals.
Oppelt. 6 pp. and drawings.

REPORT
NO.

- 20 Determination of commercial yields of gas, tar, benzol and ammonia from a coal utilizing full scale coke oven. O. Hubmann. 30 pp. with drawings.
- 21 Determination of commercial yields of gas, tar, benzol and ammonia from a coal utilizing full scale coke oven. Quantity by-products liberated during course of carbonization - second method. Oppelt. 3 pp. and drawings.
- 22 Memorandum - Krupp-Lurgi low temperature carbonization equipment exhauster fan. 2 pp. and drawings.
- 23 Research experiments to detoxicate illuminating gases. Ernst G. Graf. 21 pp. and drawings.
- 24 Detoxification plant - Bohlen. O. Hubmann. 3 pp. and drawings.
- 25 Comparison of results of oil shale carbonization in Estonia. H. A. Wahl. 44 pp.
- 26 The Meiler-Pile carbonization system. H. A. Wahl. 54 pp.
- 27 Information regarding refining methods of shale oil. Ernst G. Graf. 8 pp.
- 28 Description of low temperature process for oil shale. Ernst G. Graf. 8 pp. and drawings.
- 29 Ideas and proposals on oil shale utilization. Ernst G. Graf. 6 pp.
- 30 Information on shale oil requested by Bureau of Ships. Karl A. Fischer. 2 pp.
- 31 Translation Russian article: Manufacture of liquid fuels from combustible shales by method of thermal solution. M. K. D'yakova. 22 pp.
- 32 Carbonization of oil shale in situ. Original and translator's notes of Swedish report. 2 pp. and sketch.

REPORT
NO.

- 33 Answering of questions of Bureau of Ships regarding shale oil treatment. H. A. Wahl. 16 pp.
- 34 Situation and prospects of development of oil shale treatment. Byron Wehm and H. A. Wahl. 78 pp.
- 35 Generation of electric power of oil shale carbonization in Estonia. H. A. Wahl. 14 pp. and drawings.
- 36 Oil shale carbonization plant at Kovioli, Estonia, Trockel. 5 pp. and drawings.
- 37 Subterranean carbonization distillation and gasification of oil shale. Erick Sarapu. 3 pp. and photo.
- 38 Fischer assay of oil shale. Oppelt. 3 pp. and drawings.
- 39 Comments on characteristics and refining methods of shale oils with reference to Bureau of Ships questionnaire. Oppelt. 13 pp.
- 40 Refining of shale oil. O. Hubmann. 5 pp. and drawings.
- Advances in solvent dewaxing of mineral oils and tars. By Karl A. Fischer:
- 41 I. Introduction. 6 pp.
- 42 II. Chemical conclusions. 24 pp.
- 43 III. Crystallographic conclusions. 28 pp.
- 44 IV. Filters and phase problems. 31 pp.
- 45 V. Static charge filter cloth lab research. 24 pp.
- 46 VI. Technical viewpoints of dewaxing ideas. 29 pp.
- 47 VII. New electro-optical analysis for paraffins. 18 pp.
