

INDEX - MICROFILM REEL 255
(Original designation EM-41)

Russia's Oil Shale Industry. By Simon Klosky. (Reprint from
Chemical & Engineering News, Vol. 26, No. 12).

Selected Russian papers on oil shale. Articles taken from
Goriuchie Slantsi (Combustible Shales).

	<u>Pages</u>
<u>No. 1 (1931):</u>	
Decision of the Council of Labor and Defense on the development of shale industry.	1-3
Untitled.	5-6
The outlook of the shale industry in 1932.	7-9
The problems of recovery of shales from common bog (or quicksand).	9-15
Shales of the Savelev deposits.	16-19
Thermal decomposition of combustible shales.	23-28
Status of geological exploratory work on combustible shales.	35-37
<u>Nos. 2-3 (1931):</u>	
Fourth quarter - conclusion.	1-2
Status of the shale industry on the Central Volga.	3-7
Some pertinent questions.	7-8
The Omutnin problem.	8-10

T.O.M. Reel 255

	<u>Pages</u>
<u>Nos. 2-3 (1931): (Contd.)</u>	
Some immediate problems of the scientific research institute, "Sahyuzslantza" (Shale-Oil-Industry Union).	11-12
Thermal decomposition of shale.	12-16
Combustion of shale in steam combustion chambers.	24-29
The question of utilizing shale ashes in cementing.	29-35
Possibilities for simultaneous or side recovery of oil shale and phosphorite from common bog (or quicksand).	35-41
Concerning precipitation.	41
Plants. Shale pits.	45
<u>Nos. 4, 5, and 6 (1931): Missing.</u>	
<u>No. 1 (1932):</u>	
Construction of mining foundations--primary problem in 1932.	1-4
We approach the starting of the Kashpir works.	5-7
The question of the development of the Savelev shale mines.	7-8
Kashpir deposits of oil shale.	9-11
Method of working shale deposits.	12-21
Heating for distillation set-up.	21-23
Standardization work on shale mines.	24-27
Desulfurization of oil shale gasoline.	28-29

T.O.M. Reel 255

	<u>Pages</u>
<u>No. 1 (1932): (Contd.)</u>	
Refining oil shale gasoline.	29-34
Extraction of bitumen from shale tar.	35-42
Combustion of shale in steam combustion chambers. (Continued).	42-46
Survey of Estonian shale literature.	52-53
<u>No. 2 (1932):</u>	
Questions for the first quarter of the year.	1-4
The production program for 1932.	5-10
Mechanization process for excavation at Kashpir.	10-13
Dry shale - good fuel.	13-18
Financial matters in shale mines on the Central Volga.	18-19
Prospect for a second shale five-year plan on the Central Volga.	20-24
Slow rate of construction of shale mills.	24-27
Use of shale tars in internal combustion engines (railroads and automobiles)	28-34
Delivery of shale at a distance.	34-38
III. Union conference on geological prospecting work for coal and oil shale.	38-42
Oil shale of the Chuwash Socialist Soviet Republic.	42-45
<u>No. 3 (1932):</u>	
Change.	1-3
The second five-year plan for oil shale.	10-15

	<u>Pages</u>
<u>No. 3 (1932):</u> (Contd.)	
Savelev shales -- high-power energy basis of the Lower Volga.	15-20
Shales of the Leningrad region.	20-23
Mechanization process for excavation at Kashpir (conclusion).	24-25
Combustion of shale in the pulverized state.	25-27
Region utilizablē for shale.	28-29
Motor property of liquid shale fuel.	29-36
Heating stoves for low temperature carbonization of shale.	39-43
Esthonian literature on shale.	50-51
<u>No. 4 (1932):</u>	
Advancing in plans from study to consideration propo- tions.	1-2
Concerning expediency of exploiting the Alexyev mine.	6-11
Tar wagons for shale mines.	14-16
Toward quality shale.	22-30
The problem of geological exploration work and methods of exploration of the Zavolzh deposits of oil shale.	33-41
Organic composition of oil shale.	42-45
Concretes without Portland cement, using cinders of Kashpir shale.	46-53
Increasing work on the framework.	53-54
Geological exploration work on shale.	54-56

T.O.M. Reel 255

	<u>Pages</u>
<u>Nos. 5 and 6 (1932):</u>	
The chemistry of shale emerges into the field of plant experimentation.	1-2
The Komsomal (Young Communist League) in the work on shale.	2
Result of work in the first quarter of 1932.	3-8
The problem of the starting stage of the Kashpir shale distillation plant.	8-10
The price of shale.	11-15
The problem of the shale industry in 1933.	15-20
Combustible shales of the Bashkir Soviet Socialist Republic.	20-24
Drying shale.	42-44
Resources of combustible shale of the Union in 1932 and provision for the shale industry in the second five-year period.	55-61
The problem of concentration of shale in Kashpir.	62-65
Is it possible to open common bog shale deposits of large scale industrial importance at Zavolzh in the North or North-West?	66-71
Composition of shale gas extracted at different temperatures.	71-73
Downstream printing concerning the work to get shale.	76-78
<u>No. 7 (1932):</u>	
Thoughts toward production. (Ninth trade union conference).	1-3
The question of the working of the Savelev deposits.	4-8

T.O.M. Reel 255

Pages

No. 7 (1932): (Contd.)

The power basis of the shale industry during the next period.	9-11
Questions concerning mechanization of underground works at shale mines.	12-16
Sinking vertical shafts.	16-20
Determination of the size of shaft and standard mining shafts of the Kashpir combustible shale deposits.	21-25
Status of the mechanization of the underground works at the Vyemarn and Alexyev mines.	25-29
Features of the methods of shale analysis.	33-37
Quick inspection of combustible shale.	37-42
The question of underground oxidation of combustible shales.	42-43

Nos. 8 and 9 (1932):

Reorganization of operation.	1-3
Outlook for the Great Gdov Works.	3-14
Principal work in 1932 at the mines of the Shale-Oil-Industry Union.	14-17
Repair basis of the shale industry.	17-21
Equipment for sinking shafts. (Lucien Eaton. Eng. and Min. Journal, 3 and 4, 1932).	21-28
Relationship between heat of combustion, volume of hydrogen and specific weight of petroleum products and shale oils.	29-37

	<u>Pages</u>
<u>Nos. 8 and 9 (1932): (Contd.)</u>	
Thermal decomposition of combustible shales with simultaneous cracking of heavy fraction of shale tar.	37-43
Carbonic acid of shales.	43-46
Selection of method for determination of moisture in shale.	46-48
The problem of drying shale.	49-55
<u>No. 10 (1932): Missing.</u>	
<u>Nos. 11 and 12 (1932):</u>	
Preliminary results of work of the Shale-Oil-Industry Union for 1932.	1-10
Production outlook of shale mines in 1933.	11-16
Improving actual conditions -- alternate problems.	16-19
Power erection at shale mines.	19-22
Problem in 1933 in the field of shale combustion and utilization of ashes.	22-23
The problem of the Gdov mine.	24-28
Problems of marketing Leningrad shales.	31-34
Transportation of shale from place of mining to drift.	35-39
Cutting a tunnel at Obshchem Seerte.	39-44
Results of tests with mechanical cutting at Kashpir.	44-46
The dust problem at shale distillation plants.	50-52
Sulfur in shale and shale gasolines.	55-59
Asphalt and bitumen from shale tar. (Seems to be incomplete).	61-64

T.O.M. Reel 255

Pages

Nos. 1-12 (1933): Missing.

No. 1 (1934):

Seventh assembly of the Soviet Union Communist Party and the program of work of the shale industry in 1934.	1-4
Hydro-geological conditions of the Gdov shale mine.	5-11
The problem of developing Leningrad combustible shale.	11-15
Principal problems of repair building of the Shale-Oil-Industry Union.	15-17
Technical plan of the first big shale mines at Gdov.	18-22
Gasification of shale in gas generators.	22-32
High temperature decomposition of "kukersits".	33-38
Study of the characteristics of building stoves made from shale ashes.	39-43
Desulfurization of shale gasolines by hydrogenation under pressure in the presence of catalysts.	44-50
Physico-chemical characteristics of Kashpir shale tar.	50-57
Fifteen years of government shale industry in Estonia.	58-59

No. 2 (1934):

Considering the lessons of 1933.	1-5
From the practice of burning Gdov shales to the hand-operated combustion chamber of the Lancashire boiler.	13-17
The question of method of working the Savelev mine.	18-23
Preliminary cementation of rocks at the shafts of Gdov.	23-24
Combustion of Savelev shales.	24-28

T.O.M. Reel 255

	<u>Pages</u>
<u>No. 2 (1934):</u>	
Oven for bituminization of shale.	28-30
First shale furnace in the boiler of the Leningrad shale distillation plant.	30-36
Desulfurization of shale gasolines by catalytic hydrogenation at atmospheric pressure.	40-44
A more precise method to test the carbonate of shale.	44-51
Nitrogen in the liquid products of the low-temperature carbonization of Kashpir shale.	52-55
Thermal decomposition of Kashpir shales under pressure of hydrogen.	56-60
<u>No. 3 (1934):</u>	
Methods of activating shale ashes.	14-22
Physico-chemical characteristics of Kashpir shale tar.	23-26
A more precise method to test the carbonate of shale.	26-30
Thermal decomposition of "kukersits".	31-35
Cracking of shale tars with aluminum chloride.	35-41
<u>No. 4 (1934):</u>	
Boosting the yield of shale.	1-4
Change of temperature in the handling of the oven at Kashpir.	5-9
Combustible shales and the shale industry abroad.	9-21

	<u>Pages</u>
<u>No. 4 (1934): (Contd.)</u>	
Tests with gasification of Kashpir shales in gas generators, established at the "Burlak" plant in Shirayev.	21-28
Combustion of lump Kashpir shale at mechanical grate.	35-45
The question of utilization of shale ash.	46-48
Shales of Nizhne Povolzhe.	48-51
Action of zinc chloride on shale gasoline.	51-56
Hydrogen in gas resulting during distillation of shale in comparison with gases from peat, coal, sapropel and petroleum.	56-60
<u>No. 5 (1934):</u>	
The seventh anniversary of Gdov.	1-4
The Kashpir shale combine.	5-9
Prospect of study and utilization of combustible shales of the Saratov region.	9-14
Checking the shale gas generator POVTI at the water tower.	15-17
Testing shale furnace T-IV at grinder No. 5 in Samar.	18-24
Concretes from ashes of the Kashpir shale with slag.	25-29
Ashes of combustible shales as raw material for manufacture of Portland cement.	30-32
Sulfurous compounds in Kashpir shale tar and methods of their removal.	33-37
Chemical utilization of Kashpir shales.	38-41

T.O.M. Reel 255

	<u>Pages</u>
<u>No. 5 (1934): (Contd.)</u>	
Shales of Nizhne Povolzhe.	42-46
Action of temperatures of low-temperature carbonization on the yield of tar.	47-52
Removal of H ₂ S from gas of shale low-temperature carbonization ethanolamines.	52-57
Reactive power of shale coke.	58-62
<u>No. 6 (1934):</u>	
Memories of the renowned chief of the shale industry. (S. M. Keerov).	2-3
Construction at the Kashpir shale combine.	4-10
Regulations for maintenance of the shale gas generator POVTI.	17-19
High-temperature distillation of shale-coal mixture.	20-27
Experimental results with the shale gas generator POVTI.	27-33
"Tiofol" as cooling liquid for cutting metals.	34-37
High-temperature distillation of shale and peat with cracking of tar vapor according to the method of Prof. Franka.	38-41
Continuous action oven for low-temperature distillation of shale fines....	41-44
Utilization of ashes of Wurtemberg combustible shale.	45-50
Investigation of binding properties of coke from Gdov shales from the ovens at Dessa.	51-59

T.O.M. Reel 255

	<u>Pages</u>
<u>No. 1 (1935):</u>	
Set-up for distillation of shale at the Kashpir shale distillation works.	17-23
Modern drying devices and their performance on damp... fuels.	31-37
Cleaning gases with phenolate solution.	42-51
Kinetics of thermal decomposition of sulfurous shales.	51-60
Reactivity power of shale coke.	60-61
Estonian combustible shale "kukersits", their chemistry, technology and analysis.	62-64
<u>No. 2 (1935):</u>	
Principal construction undertakings of the Shale-Oil-Industry Union in 1934.	6-12
Power set-up at the Gdov mines.	12-17
Production results of the shale mining industry in 1934.	17-27
Operating efficiency at shale mines.	28-31
Shale cement.	39-50
Use of shale tar for bracing underground mining.	51-54
Causes for solidification of shale ashes.	55-58
Kinetics of thermal decomposition of sulfurous shales.	57-61
Investigation of asphalts derived from Estonian combustible shale.	61-66

T.O.M. Reel 255

	<u>Pages</u>
<u>No. 2 (1935):</u> (Contd.)	
Estonian combustible shales "kukersits", their chemistry, technology, and analysis.	67-68
The work of the Kashpir shale distillation plant.	69
<u>No. 3 (1935):</u> Missing.	
<u>No. 4 (1935):</u>	
Toward one-hundred percent completion of the annual plan.	1-12
Geological exploration for combustible shales in 1934.	13-20
The Kashpir mine in the first third of 1935.	21-28
Gdov construction in the first quarter of 1935.	29-31
Heating and power plant of the Gdov mines.	32-41
Shale industry of Manchuria.	42-49
Combustion of shales and their ashes.	64-75
Use of shales in the cementing materials industry.	77-78
Thermal decomposition of Gdov shales by pressure hydrogenation.	82-87
Shale mining in 1934 (table).	87
Work undertaken by the Shale-Oil-Industry Union in the first half of 1935 (table).	88
<u>No. 5 (1935):</u>	
Stakhanov methods in the work shale industry.	1-2
Power set-up in the shale mines in 1936.	3-7
Comments on the projects of Mines 1 and 2 of the Kashpir deposits.	8-11

T.O.M. Reel 255

	<u>Pages</u>
<u>No. 5 (1935): (Contd.)</u>	
The growth of Savelev.	12-19
Remodeling ovens of the Kashpir shale distillation works.	28-33
Portland cement from ashes of combustible shales. (Seems to be incomplete).	38-44
Gases from low-temperature carbonization of shales.	49-56
Pyrolysis of products from low-temperature carbonization of Kashpir shale.	57-63
Cleaning shale gasolines and kerosenes by the Edeleanu method.	64-66
Physical change and oxidation of Savelev shales.	67-69
Estonian combustible shales "kukersits", their chemistry, technology and analysis.	70-72
Problems of combustible shales.	73-76
<u>No. 6 (1935):</u>	
The leader's speech -- our fighting program.	1-4
Results of work of the shale industry for 9 months of 1935.	5-14
Stakhanov methods at the Kashpir combine.	27-29
Stakhanov movement at the Kashpir shale mine.	29-31
Dyegrunov deposits of combustible shales.	31-33
Novosyemyenov deposits of bituminous shales...	34-37
Shales of Middle Volga.	38-39

	<u>Pages</u>
<u>No. 6 (1935): (Contd.)</u>	
Combustion of shale tar.	40-49
Operation of the Kashpir power plant.	50-60
Calculation of the cost of shale ashes.	61-68
Pyrolysis of products from the low-temperature carbonization of Gdov shales.	69-72
Corrosive properties of shale tars and sulfonic acid.	73-79
Works of the Shale-Oil-Industry-Union for 1935. (Table).	80

No. 2 (1935): (Contd.)

Subject index for articles appearing in "Combustible Shales" from 1931-1934.	76-86
------------------------------------------------------------------------------	-------

No. 6 (1935):

Only the cover is present.

Articles from "Khimiya Tverdovo Topleva"
(Chemistry of Solid Fuels)

Vol. I, No. 1 (1930):

Several short items: Transmission of coke products for assembly at Kemerov; Chronicles of the shale society; Generator arrangement for peat in Guse-Khrustalna; Arrangement for coking peat at Redkin; Plan of work for the Association of Institutes and Laboratories for the study of coals and products of their processing in 1930-1931.	41-43
----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-------

Vol. I, No. 2 (1930): Missing

	<u>Pages</u>
<u>Vol. I, No. 3 (1930):</u>	
Problems of scientific research work in combustible shales.	28-36
Status of shale affairs at Nizhne Povolzhe.	43-46
<u>Vol. I, No. 4 (1930):</u>	
First results of cracking and berginization of shales.	55-57
<u>Vol. I, No. 5 (1930):</u> Nothing.	
<u>Vol. I, No. 6 (1930):</u> Nothing.	
<u>Vol. II, No. 1 (1931):</u>	
Cracking and hydrogenation of Estonian and Kashpir shale tars.	2-35
Feasibility of utilizing combustible shales for manufacture of construction materials.	36-48
<u>Vol. II, No. 2 (1931):</u>	
Cracking and hydrogenation of Kashpir shale tars.	3-15
<u>Vol. II, No. 3 (1931):</u> Nothing.	
<u>Vol. II, No. 4 (1931):</u>	
Barzas combustible shales.	41-43
<u>Vol. II, No. 5 (1931):</u>	
Use of shale tars in internal combustion engines (trains and automobiles).	3-11
<u>Vol. II, No. 6 (1931):</u>	
Study of the light fractions of tars from shales.	21-31

<u>Vol. II, No. 7 (1931):</u>	Nothing.	
<u>Vol. II, No. 8 (1931):</u>	Nothing.	
<u>Vol. II, No. 9 (1931):</u>	Nothing.	
<u>Vol. II, No. 10 (1931):</u>		
	Tars from shales.	62-67
<u>Vol. II, No. 11-12 (1931):</u>		
	Problems of cracking shale tars in the United States of America.	131-134
<u>Vol. III, No. 1 (1932):</u>		
	Hydrogenation of shale tar under pressure.	38-60
	Sulfur from combustible shales.	61-73
<u>Vol. III, No. 2 (1932):</u>	Nothing.	
<u>Vol. III, No. 3 (1932):</u>	Nothing.	
<u>Vol. III, No. 4 (1932):</u>	Nothing.	
<u>Vol. III, No. 5-6 (1932):</u>		
	Chuwash combustible shales.	443-476
<u>Vol. III, No. 7-8 (1932):</u>	Nothing.	
<u>Vol. III, No. 9-10 (1932):</u>		
	Mineral coals and combustible shales.	611-629
	Phenols from tar of Kashpir shales.	653-668
<u>Vol. III, No. 10 (1932):</u>	Nothing.	
<u>Vol. III, No. 11 (1932):</u>	Nothing.	

	<u>Pages</u>
<u>Vol. III, No. 12 (1932):</u> Nothing.	
<u>Vol. IV, No. 1 (1933):</u>	
Analyses of combustible shales.	86-88
<u>Vol. IV, No. 2 (1933):</u> Nothing.	
<u>Vol. IV, No. 3 (1933):</u>	
Thermal decomposition of combustible shales.	278-287
<u>Vol. IV, No. 4 (1933):</u>	
Destructive hydrogenation of Kashpir tar.	332-354
Conditions of analysis of combustible shales	371-380
<u>Vol. IV, No. 5 (1933):</u>	
Combustible shales of the Leningrad region.	385-400
Barzas shales as a possible source of liquid fuel.	401-407
Stabilization and cleaning of gasoline from shale tar by the hydrogenation method.	459-469
Composition of the acid fractions of tar from Leningrad shales.	469-480
<u>Vol. IV, No. 6 (1933):</u>	
Identification of groups of hydrocarbons in the shale gasolines.	573-577
The question of destructive hydrogenation of Kashpir tar.	598-605
<u>Vol. V, No. 1 (1934):</u>	
Organic composition of combustible shales.	7-16
Kenderlick coals and shales.	39-46

	<u>Pages</u>
<u>Vol. V, No. 2 (1934):</u> Nothing.	
<u>Vol. V, No. 3 (1934):</u>	
Catalytic desulfurization of shale gasolines from Kashpir tar in the presence of hydrogen at atmospheric pressure.	267-273
<u>Vol. V, No. 4 (1934):</u>	
Desulfurization of shale gasolines by hydrogenation in the presence of catalysts.	333-357
<u>Vol. V, No. 5 (1934):</u> Nothing.	
<u>Vol. 5, No. 6 (1934):</u>	
Chemical investigation of the organic composition of "kukersits".	506-509
The question of radioactivity of combustible shales.	525-527
Composition of the 160-175° fraction of neutral oil from the tar of Kashpir shale.	543-547
<u>Vol. V, No. 7 (1934):</u> Nothing.	
<u>Vol. V, No. 8 (1934):</u>	
Oven with internal heater for coking of peat.	711-719
<u>Vol. V, No. 9-10 (1934):</u>	
Investigation of high-temperature Gdov shale tar.	771-787
Extraction of normal heptane from shale gasoline.	788-790
<u>Vol. VI, No. 1 (1935):</u>	
Destructive hydrogenation of coal.	40-66
<u>Vol. VI, No. 2 (1935):</u> Nothing.	

	<u>Pages</u>
<u>Vol. VI, No. 3 (1935):</u>	
Study of light fraction of tar from Kashmir shale.	250-257
<u>Vol. VI, No. 4 (1935):</u>	
The question of radioactivity of combustible shales.	288-291
Hydrogenation of neutral kerosene fraction of tar from Gdov shales.	340-347
<u>Vol. VI, No. 5 (1935):</u>	
Stabilization and desulfurization of shale gasolines.	438-448
<u>Vol. VI, No. 6 (1935):</u>	
Phenols from shale tar water and methods of their identification.	545-556
<u>Vol. VI, No. 7 (1935):</u> Nothing.

<u>Vol. VI, No. 9 (1935):</u> Nothing.	
<u>Vol. VI, No. 10 (1935):</u> Nothing.	
<u>Vol. VII, No. 1 (1936):</u> Nothing.	
<u>Vol. VII, No. 2 (1936):</u>	
The radioactivity of shales.	94-98
Study of the acid fraction of Gdov shale tar.	136-143
<u>Vol. VII, No. 3 (1936):</u>	
Thermal decomposition of Gdov combustible shale.	334-346

	<u>Pages</u>
<u>Vol. VII, No. 4 (1936):</u>	
Low-temperature carbonization of Lenin coal at Redkin peat-coking plant in stoves of the Pinch system with internal heating.	388-412
<u>Vol. VII, No. 5 (1936):</u>	
Stabilization and desulfurization of Gdov shale gasoline with chemical reagents.	491-497
<u>Vol. VII, No. 6 (1936):</u> Nothing.	
<u>Vol. VII, No. 7 (1936):</u>	
Highway asphalts from shale tars.	714-723
<u>Vol. VII, No. 8 (1936):</u> Nothing.	
<u>Vol. VII, No. 9-10 (1936):</u> Nothing.	
<u>Vol. VIII, No. 3 (1937):</u>	
Removal of oxygen compounds from Gdov shale gasoline by organo-magnesium compound.	255-259
<u>Vol. VIII, No. 4 (1937):</u>	
Investigation of composition of Gdov shale gasoline.	325-331
<u>Vol. VIII, No. 12 (1937):</u>	
Phenols from shale tars.	1093-1107
<p>Articles taken from Zhurnal Prikladnoe Khimie (Journal of Applied Chemistry)</p>	
<u>Vol. 7, No. 8 (1934):</u>	
Toward knowledge of humic substances.	1476-1479

	<u>Pages</u>
<u>Vol. 8, No. 3 (1935):</u>	
Obtaining aluminum oxide from shale ashes by the hydrochloric acid method.	389-396
<u>Vol. 9, No. 4 (1936):</u>	
Sulfonation of the heavy fraction of Gdov shale tar.	731-736
<u>Vol. 9, No. 9 (1936):</u>	
Shale soap and shale tar in the textile industry and in flotation.	1596-1604
<u>Vol. 12, No. 1-2 (1939):</u>	
Mutual solubility of shale gasoline and ethyl alcohol at low temperatures in the presence of stabilizers.	50-54
<u>Vol. 12, No. 5-8 (1939):</u>	
Chemical composition and detonation properties of shale gasoline.	867-870
Effect of anti-knock additions on the octane number of shale gasoline.	871-874
Phenols of primary tars and their stabilizing action on shale gasoline in comparison with synthetic inhibitors.	875-877
<u>Vol. 12, No. 9-12 (1939):</u>	
Kenderlick shales as raw material for motor fuel.	1475-1480
<u>Vol. 13, No. 1-4 (1940):</u>	
Thermal dissolving of Gdov shale.	122-131
Preparation of recovered humic acids from coal shale and their properties.	132-139

Vol. 13, No. 5-8 (1940):

Thermal dissolving of combustible shales.

1045-1052

Articles taken from Izvestia Academie Nauk
(Cl. Sci. Tech.) Leningrad

(Bulletin of the Academie of Science, Leningrad)

No. 1 (1940):

Combustible shales -- source of motor fuel and raw material for chemical industry.

97-99

No. 4 (1940):

Cracking light benzine fraction of tar from shale of the Gdov deposit.

29-35

No. 5 (1940):

Cleaning zinc chloride from the cracking distillates of shale tar.

43-49

No. 4 (1941):

Sulfur compounds of tar from shale of common bog.

41-44

No. 4-5 (1944):

Obtaining liquid fuel from combustible shales by the thermal dissolving method.

258-274

No. 7-8 (1944):

Thermal dissolving - a new method for obtaining synthetic liquid fuel.

498-505
