1-4	1 Scientific Council Report No. 1 of the first meeting of the Council held at Rodleben, June 29, 1939. (Incomplete report.)
5-40	2 Scientific Council Report No. 4 of the meeting held at Düsseldorf, April 26, 1940. The proceedings of the morning session are reproduced. They include the following reports: <ol style="list-style-type: none"><li>1. Changes in the composition of the Scientific Council. By Dr. Raecke. 1 p.</li><li>2. Status of the total work of the Research Laboratory at Rodleben. By Dr. Hentrich. 30 pp. Subjects discussed are:<ol style="list-style-type: none"><li>A. Conversion reactions of olefins.</li><li>B. Conversion reactions of paraffins.</li><li>C. Obtaining fatty alcohols from acetylene over acetaldehyde, etc. (Syrol Process).</li></ol></li><li>3. Work of Section 51, Düsseldorf. (This has been included in Dr. Hentrich's report.)</li><li>4. Work of the Scientific Laboratory at Chemnitz. By Dr. Burgdorf. 2 pp. (A report on the action of sulfuric acid on high-molecular normal primary alcohols.)</li></ol>
41-66	3 Scientific Council Report No. 5 of the meeting held at Chemnitz, July 17, 1940. The proceedings of the morning session are reproduced. They include the following reports: <ol style="list-style-type: none"><li>1. The status of the total work of the Research Laboratory at Rodleben. By Dr. Hentrich. 26 pp. Subjects discussed are:<ol style="list-style-type: none"><li>A. Obtaining olefins from paraffin chloride.</li><li>B. Preparation of olefins from paraffin sulfochlorides.</li><li>C. Preparation of olefins as by-products in the conversion of paraffin chloride with sulfite.</li><li>D. Sulfonation of olefins.</li><li>E. OXO synthesis.</li><li>F. Separation of primary fatty alcohols from mixtures with paraffins.</li><li>G. Accumulation of sulfur-containing compounds on olefins.</li><li>H. Nitration of paraffins.</li><li>I. (Omitted in lettering)</li></ol></li></ol>

Frames    Item

1. The status of the total work of the Research Laboratory at Rodleben. By Dr. Hentrich. 30 pp. Subjects discussed are:
  - A. The preparation of olefins. -- Synthesis from CO and H<sub>2</sub>. Preparation by dehydrogenation of paraffins with chain length C<sub>10</sub> - C<sub>20</sub> -- Preparation by cracking of higher paraffins.
  - B. OXO synthesis with certain olefins.
  - C. Washing agents with disulfimide groups.
  - D. Paraffin nitration: nitro-paraffins and nitro-paraffin-alcohol-sulfonates.
2. The work of the Scientific Laboratory at Chemnitz. By Dr. Burgdorf. 5 pp. Subject of discussion: The sulfonation of alcohols.

(Diagram of laboratory cracking apparatus attached to conference report.)

6

Scientific Council Report No. 8 of the meeting held at Rodleben, June 9, 1941. The proceedings of the morning and afternoon sessions are reproduced. They include the following reports:

1. The status of the total work of the Research Laboratory at Rodleben. Subjects discussed are:
  - A. Progress of the "Enpeol Process" -- (the preparation of nitro-paraffin-alcohol.) By Dr. Lütgert. 6 pp.
  - B. Progress of the "Nofol Process" (The preparation of alcohols.) By Dr. Lütgert. 5 pp.
  - C. Investigation of the washing and textile aid properties of the Enpeol (nitro-paraffin-alcohol) sulfonates. By Dr. Lübke. 3 pp.
  - D. Investigation of the washing and textile aid properties of Nofatin II (disulfimide compound.) By Dr. Lübke. 2 pp.
  - E. The practical value of the condensation products of fatty alcohols and ethylene oxide in the most varied interests of the Henkel section. By Dr. Lübke. 4 pp.
  - F. The work of the Technical Testing Laboratory at Rodleben as a result of the work of the Research Laboratory. By Dr. Lütgert. 9 pp.
  - G. Progress in Igelit plasticizers. By Dr. Hentrich. 6 pp.
  - H. Latest work in the field of raw materials for lacquer. By Dr. Gündel. 5 pp.
  - I. Status of Nekal work. By Dr. Gündel. 3 pp.
  - J. Fat-saving or fat-free iard agents. By Dr. Gündel. 2 pp.
  - K. Work on the continuous sulfonation of fatty alcohols. By Dr. Lütgert. 3 pp.

<u>Frames</u>	<u>Item</u>
	<p>2. Work of the Scientific Laboratory at Chemnitz. By Dr. Burgdorf. 2 pp. (Concerns mainly sulfonation work.)</p> <p>3. Report on the cocci-effective sulfanilamides. ("Vitigon" group.) By Dr. Hentrich. 7 pp.</p> <p>(Five discussions given by Research Laboratory personnel and the report of Section 51 which were listed in the program of the meeting at Düsseldorf have not been included in the write-up of Scientific Council Report No. 8.)</p>
179-227	<p>7 Scientific Council Report No. 9 of the meeting held at Chemnitz, Sept. 25, 1941. The proceedings of the morning session are reproduced. They include the following reports:</p> <p>1. Work of the Research Laboratory at Rodleben. Subjects discussed are:</p> <p>A. Status of the semi-technical testing of the "Enpeol Process" (nitro-paraffin-alcohol sulfonate washing agent.) By Dr. Lütgert. 7 pp.</p> <p>B. Wetting agent from first-run fatty acids or from cooling oil of the paraffin oxidation. By Dr. Hentrich. 8 pp.</p> <p>C. Investigation of the constitution of OXO alcohols. By Dr. Kirstahler. 8 pp.</p> <p>D. Accumulation of aromatic compounds on olefins. Sulfonation of the products. By Dr. Hentrich. 7 pp.</p> <p>2. The work of Section 51, Düsseldorf. Subjects discussed are:</p> <p>A. Status of the information on the constitution and properties of the Fischer-Tropsch and OXO compounds. By Dr. Blaser. 18 pp.</p> <p>B. Guerbet condensation with mono and diols. By Dr. Blaser. 2 pp.</p> <p>3. The work of the Scientific Laboratory at Chemnitz. By Dr. Burgdorf. (Question of sulfonation is discussed.) 2 pp.</p>
228-301 (Frames 270-279 are not included due to faulty numbering)	<p>8 Scientific Council Report No. 10 of the meeting held at Düsseldorf, Feb. 13, 1942. The proceedings of the session are reproduced. They include the following reports:</p> <p>1. Work of the Research Laboratory at Rodleben. Subjects discussed are:</p> <p>A. A new way to utilize the unsaponifiable matter of the Mersol manufacture for use as washing agents. By Dr. Kaiser. 5 pp.</p> <p>B. Investigation of washing agents made from the unsaponifiable matter of the Mersol production. (Forlan Process.) By Dr. Götte. 6 pp.</p> <p>C. Preparation of fat-saving washing agents. By Dr. Götte. 20 pp.</p> <p>D. Utilization of the Reed reaction for production of new types of wetting agents. By Dr. Hentrich. 6 pp.</p> <p>E. Sugar hydrogenation. By Dr. Stickdorn. 11 pp.</p> <p>F. New emulsions for production of cosmetics. By Dr. Gündel. 7 pp.</p> <p>2. Work of Section 51, Düsseldorf. Subject of the discussion: Use of UV-Mersol (unsaponifiable Mersol). By Dr. Blaser. 9 pp.</p>
